Jacamar (jak'a-mār), *n.* [Brazilian *jacamarica*.] The name given to climbing birds of the genus *Galbula*, and sub-family Galbulinae, nearly allied to the kingfishers, differing, however, in the formation of their toes, and in their food consisting of insects. They belong to the order Scansores, and are about the size of a lark. Numerous species are described. Their plumage has a metallic lustre. They live in damp woods and feed on insects. Most if not all the true jacamars are natives of tropical America. The green jacamar is the *Galbula viridis*; the paradise jacamar is the *G. paradisea*, a native of Surinam and Cayenne.

Jacana (jak'a-na), *n.* The common name of the birds of the genus *Parra*, comprising gallatorial or wading birds, having long

toes, the nails of which are very long and pointed, so that they can stand and walk on the leaves of aquatic plants when in search of their food, which consists of worms, small fishes, and insects. They have received their vulgar name of *sargons* from the prominent spur on the wing. They are noisy and quarrelsome birds, inhabiting marshes in

hot climates. In contour and habit they somewhat resemble our moor-hen, to which they are very closely allied. Various species are spread over the tropical regions both of the Old and New World.

Jacaranda (jak-a-ran'da), See ROSE-WOOD.
Jacare (jak'a-rā), *n.* [Brazilian.] A species of Brazilian alligator, having a ridge from eye to eye, fleshy eyelids, the cervical distinct from the dorsal scutes, and small webs to the feet. *Jacare* or *Alligator sclerops* is a common species.

Jaca-tree, Jack-tree (jak'a-trē, jak'trē), *n.* [Native name.] *Artocarpus integrifolia*, a species of bread-fruit tree found in the Indian Archipelago. The fruit is called *jack-fruit*, and the wood *jack-wood*.

Jacchus (jak'kus), *n.* [In Greek, a name of Bacchus.] A genus of South American monkeys with thumbs on the hind feet only, and flat nails only on the thumbs. The monkeys which constitute this genus are of a small size, with short muzzle, flesh-coloured face, round head, and tufts of white hair on the sides of the head. They are squirrel-like in their habits, and omnivorous. They are natives of Guiana and Brazil, and are known by the name of *marmosets*.

Jacconet (jak'ō-net), See JACONET.

Jacent (jā'sent), *a.* [*L.* *jacens, jacentis*, ppr. of *jacere*, to lie.] Lying at length. 'Jacent posture.' *Reliquiae Wottonianae*.

Jacinth (jā'sinth), *n.* Another spelling of *Hyacinth* (which see).

Jacitara-palm (jas-ī-tā'ra-pām), *n.* [Brazilian name.] *Desmoncus macroacanthus*, a palm found in the forests of the lowlands of the Amazon district in South America. It has a slender flexible stem, often 60 or 70 feet long.

Jack (jak), *n.* [*Fr.* *Jacques*, from *L.* *Jacobus, James*. From *Jacques* being the commonest christian name in France, it came to be synonymous with rustic, clown, simpleton, fool, as *Jacques* with peasantry, while *Jacquerie* meant an insurrection of peasantry. The Normans brought the word to England and applied it to their serfs; but as *John* was here the commonest name, it came to be used as a familiar substitute for it instead of for *James*. We find it used in the French sense of clown by Shakspeare.

Since every *Jack* became a gentleman, There's many a gentle person made a *Jack*. *Rick. III.*

The name was transferred to any contrivance which did the work of a common servant, and to anything subjected to rough usage, as *boot-jack, jack-plane, roasting-jack, jack-boots*, &c.] 1. A nickname or diminutive of the name John.—2. † A term of contempt for a saucy or impertinent fellow; an upstart; a boor; a clown.—3. Term of address among sailors, equivalent to *messmate*; hence, a popular name for a sailor.

There's a sweet little cherub that sits up aloft To keep watch on the life of poor *Jack*. *Dibdin*.

4. A contrivance for assisting a person in pulling off his boots; a boot-jack. It frequently is a simple board with a crotch or fork for retaining the heel.—5. A contrivance for raising great weights. A section of the usual form of this machine is given in the annexed figure. By turning the handle *a*, the screw *b*, the upper end of which is brought into contact with the mass to be raised, is made to ascend. This is effected by means of an endless screw working into the worm-wheel *c*, which forms the nut of the screw. On the lower end of the screw is fixed the claw *d* passing through a groove in the stock; this claw serves at once to

prevent the screw *b* from turning and to raise bodies which lie near the ground. The axis of the endless screw is supported by two malleable iron plates *e, f*, bolted to the upper side of the wooden stock or frame-work in which the whole is inclosed.—6. In *cookery*, a contrivance for turning a spit. The common jack consists of a double set of wheels, a barrel, round which the rope fastened to the pulleys is wound, a perpetual screw, and a fly. See

SMOKE-JACK.—7. In *stocking-making*, the pivoted bar or lever in a stocking-frame, from whose end is suspended the sinker which forms the loop.—8. In *spinning*, a bobbin and frame operating on the silver from the carding-machine and passing the product to the roving-machine.—9. In *weaving*, a box or frame suspended between the bank on which the bobbins of warp are mounted and the warping-mill on which the yarns are wound.

Its duty is to divide the warp threads into two alternate sets.—

10. In *music*, formerly the hammer or plectrum of a clavichord, virginal, harpsichord, or spinet, but now the intermediate piece which conveys to the hammer the motion imparted to the key, as in the piano-forte.

11. A wooden frame on which wood is sawn.

12. In *mining*, a wooden wedge used to split rocks asunder for blasting.—13. A kind of military coat quilted and covered with leather, worn over a coat

of mail. The figure shows a jack of this description belonging to the thirteenth cen-

tury. The term was also sometimes used for the coat of mail itself.

The horsemen are with *jacks* for the most part clad. *Harrington.*

14. A pitcher of waxed leather: called also a *Black-jack* (which see).—15. A small bowl thrown out for a mark to the players in the game of bowls.—16. *Naut.* a flag, ensign, or colours, displayed from a staff on the end of a bowsprit, used in making signals. In the *British navy*, the jack is the union flag when used by itself as on shore. It was named *Union Jack* after James I., under whose direction the first union flag was constructed, and who signed his name 'Jacques.' See *UNION FLAG*.—17. The male of certain animals, as the ass.—18. A young pike.—19. A name given to various brilliantly coloured fish of the mackerel family found in the West Indies.—20. Half a pint; also, a quarter of a pint. [Provincial.]—21. Any one of the knaves in a pack of cards.—*Jack-at-a-pinch*, (a) a person who receives unexpected calls to do anything. (b) A poor itinerant clergyman who has no cure, but officiates for a fee in any church where his assistance is required. [Provincial.]—*Jack-by-the-hedge*, a plant of the genus *Erysimum* (*E. Alliaria*), which grows under hedges.—*Jack-in-a-box*, (a) a plant of the genus *Hernandia* (*H. Sonora*), which bears a large nut that rattles in its pericarp when shaken. (b) A large wooden male screw, turning in a female one, which forms the upper part of a strong wooden box shaped like the frustum of a pyramid. It is used by means of levers passing through holes in it, as a press in packing, and for other purposes. (c) A kind of toy, consisting of a box, out of which, when the lid is opened, a figure springs. (d) A gambling sport in which a stick is placed upright in a hole with an article on the top of it, which is pitched at with sticks. If the article on the top, when struck, falls clear of the hole, the thrower becomes possessor of it.—*Jack-in-the-green*, *Jack-a-green*, a chimney-sweeper's boy dressed about with foliage for the procession on the 1st day of May.—*Jack-in-office*, one who is vain of his petty office.—*Jack-of-all-trades*, a person who can turn his hand to any kind of business.—*Jack-of-the-clock*, *Jack-of-the-clock-house*, a figure of a little man that strikes the quarters in some clocks.

But my time
Runs posting on in Bolingbroke's proud joy,
While I stand fooling here, his *Jack* of the clock.
Shak.

—*Jack-with-a-lantern*, or *Jack-a-lantern*, Will-o'-the-wisp, or an ignis fatuus, a meteor that appears in low moist lands.

Jack (jak), *n.* Same as *Jaca-tree*.

Jackdandy (jak-a-dan'di), *n.* A little foppish fellow; a dandiprat.

Jackal (jak'al), *n.* [Fr. *chacal*, Turk. *chakal*, Per. *shaghāl*, *shagāl*, a jackal.] 1. An animal of the genus *Canis*, the *C. (Scalorius) aureus*, resembling a dog and a fox; a native of Asia and Africa. The jackals are of gregarious habits, hunting in packs, rarely attacking the larger quadrupeds. They feed on the remnants of the lion's prey, dead carcasses, and the smaller animals and poultry, which they seize as prey. They lie concealed during the day, and their cries when they come forth at night are of a most dismal character. The jackal interbreeds with the common dog, and may be domesticated. The

Jackal (*Canis (Scalorius) aureus*).

wild jackal emits a highly offensive odour, which is scarcely perceptible in the domesticated animal. There was a popular but erroneous notion that the jackal hunted up the prey for the king of beasts, and he was therefore called the lion's provider. Hence—2. Any one who does dirty work for another; one who subverts the interests of another.

He's the man who has all your bills; Levy is only his *jackal*. *Lord Lytton.*

Jack-a-lent (jak'a-lent), *n.* [For *Jack-of-lent*.] Originally, a puppet thrown at for sport in Lent, like a Shrove-tide cock; hence, a simple sheepish fellow.

On an Ash-Wednesday,
When thou didst stand six weeks the *Jack-a-lent*,
For boys to hurl three throws a penny at thee. *B. Jonson.*

Jack-fruit (jak'fröt), *n.* The fruit of the *jaca-tree* (which see).

Jack-hare (jak'här), *n.* A male hare.

Old Timey, surliest of his kind,
Who, nursed with tender care,
And to domestic bounds confined,
Was still a wild *Jack-hare*. *Cowper.*

Jack-Ketch (jak'kech), *n.* [As regards the etymology see extracts below.] In England, a public executioner or hangman.

The man of Tyburn was formerly held by Richard Jaquette, where felons for a long time were executed; from whence we have *Jack Ketch*. *Lloyd's MS., British Museum.*

He (Monmouth) then accented *John Ketch*, the executioner, a wretch who had butchered many brave and noble victims, and whose name has, during a century and a half, been vulgarly given to all who have succeeded him in his odious office. *Macaulay.*

Jack-knife (jak'knif), *n.* A large strong clasp-knife for the pocket.

Jackman (jak'man), *n.* In milit. antiq. a man that wears a jack; a horse-soldier; a retainer.

It is Christie of the Clinthill, the Laird's chief *jackman*. *Sir W. Scott.*

Jaganat, **Jagganath** (jag'a-nat, jag'ga-nath), *n.* Same as *Jagannātha*.

Jagannātha, **Jaggannātha** (jég-gen-nā'tha), *n.* [Skr.] *Lit.* 'Lord of the World,' the name given to Krishna, the eighth incarnation of Vishnu, and to a very celebrated idol of this deity. It is a very rudely cut wooden image, having the body red, the face black, and the arms gilt; the mouth is open and of the colour of blood; the eyes are formed of precious stones. It is covered with magnificent vestments and seated upon a throne between two others—his brother Bala-Rama and his sister Subhadra, coloured respectively white and black. The temple specially dedicated to Jagannātha is situated at Puri in Orissa. It stands in a square area containing many other temples and inclosed by a lofty stone wall, each side of which is about 650 feet in length. It is built chiefly of a coarse granite resembling sandstone, and appears as a vast mass of masonry surmounted by several lofty towers, the great tower rising to a height of 192 feet. Under the main tower are placed the idol of Jagannātha and those of his brother and sister. Great numbers of pilgrims, at the time of the festivals of Jagannātha, assemble from all quarters of India to pay their devotions at his shrine. On these occasions the idol, along with those of his brother and sister, is mounted on a monstrous car resting on sixteen wheels, which is drawn by the pilgrims; and formerly great numbers of the congregated people were said to throw themselves under the wheels to be crushed to death, the victims believing that by thus immolating themselves they should be immediately conveyed to heaven. Such occurrences are now rare, and some say that they were only accidents. Written also *Juggernaut*.

Jagataic (jag-a-tā'ik), *a.* [From *Jagatai*, the native name of Turkestan, from *Jagatai*, one of the sons of Ghengis Khan, to whom he left this portion of his empire.] A term applied to the easternmost dialects of the Turkish group of tongues, spoken by the people of Turkestan.

Jain, **Jaina** (jän, jän'a), *n.* One of a Hindu religious sect, which, from the wealth and influence of its members, forms an important division of the Indian population. The name signifies a follower of *Jina*, one of the denominations of their deified saints. The sect was very numerous and important in the eighth and ninth centuries of the Christian era, and they have left many monuments of their skill and power in the fine temples built in different parts of the country. Jainism is an offshoot of Buddhism, with which it has many leading doctrines in common, but is distinguished from it by its recognition of a divine personal Ruler of

all, and by its political leanings towards Brahmanism. The Jains deny the divine origin and infallible authority of the Vedas; they reverence certain holy mortals, who have acquired by self-denial and mortification a station superior to that of the gods; and they manifest extreme tenderness for animal life. They affirm that the world has existed from all eternity, not having been created, and that it will exist for ever.

Jaina (jän'a), *a.* Of or pertaining to the Jains or their creed. — **Jaina architecture**, a style of architecture which appears to be a modification or development of Buddhist architecture, as Jainism is an outgrowth of Buddhism. In Buddhist architecture no structural arch occurs, but in the remains of Jaina architecture, chiefly consisting of temples, we meet with a horizontal arch, that is, one in which the stones rest horizontally. Its most distinguishing characteristic, however, is its dome, built horizontally and resting commonly upon eight pillars arranged octagonally; but these eight pillars are almost never left to themselves, the base being made square by the addition of four others at the angles. There are many small buildings so constructed, that is with only twelve pillars, but oftener two more are added on each face, making twenty, or four on each face, making twenty-eight, or six on each face, making thirty-six, and so on. The principal object in a Jaina temple is a cell lighted from the door, containing a cross-legged figure of the saint to whom the temple is dedicated. The cell is always terminated upwards by a pyramidal spire-like roof, and there is a portico attached, generally of considerable extent, and in most instances surmounted by a dome. The whole is inclosed in a court-yard, surrounded by a double colonnade of smaller pillars, which form porticos to a range of cells, each occupied by the cross-legged image of a saint. There are also Jaina towers, such as towers commemorative of victory, very elaborate in construction and ornamentation. The civil architecture presents no feature of interest, there being nothing to distinguish it from that of the Hindus. Jaina architecture was at its best about the eleventh or twelfth century of our era.

Jainism (jän'izm), *n.* The principles, doctrines, or creed of the Jains.

Jessamine (jes'a-min), *n.* Same as *Jasmine*. 'The Azores send their *jessamine*.' *Cowper.*
Jessamy (jes'a-mi), *n.* [A corruption of *jessamine*.] An old name for a dandy, from its being the habit of fops to wear a sprig of jessamine in their button-hole.

I had before made some progress in learning to swear; I had proceeded by fags, faith, pox, plague, 'pon my life, 'pon my soul, 'rat it, and zookers, to zauns and the devil, and I now advanced to by Jove, 'fore god, gods curse it, and demmer; but I still uttered these interjections with a tremulous tone. . . . My labour, however, was not without its reward; it recommended me to the notice of the ladies, and procured me the gentle appellation of *Jessamy*. *Hatkezworth.*

Jessant (jes'ant), *ppr.* [Perhaps a corruption of *issuant*. See ISSUE.] In her, a term which expresses shooting forth, as vegetables spring or shoot out. — *Jessant de lis*, applied to the head of a leopard having a fleur-de-lis passing through it.

Jesse (jes'sé), *n.* A large brass candlestick branched into many sconces, hanging down in the middle of a church or choir: so called from its resemblance to the genealogical tree of Jesse, the father of David, of which a picture used to be hung up in churches. — *Jesse window*, in arch. a window containing as its subject a tree of Jesse, either painted on the glass or carved on the mullions.

Jessed (jés'd), *a.* In her, having jesses on, as a hawk.

Jerkin-head Roof, Boscombe, Hants.

Jesseraunt (jes'er-ant), *n.* Same as *Jazeraunt*.

Jest (jest), *n.* [O.E. *geste*, from L. *gestum*, something done, *gesta*, deeds done, feats, whence *gestour*, *jestour*, a person who entertained company by a recital of stories.] 1. A joke; something ludicrous uttered and meant only to excite laughter.

A *jest*'s prosperity lies in the ear
Of him that hears it, never in the tongue
Of him that makes it. *Shak.*

2. The object of laughter or sport; a laughing-stock.

Then let me be your *jest*; I deserve it. *Shak.*

3. † A mask; masquerade; pageant.

He promised us, in honour of our guest,
To grace our banquet with some pompous *jest*. *Old play.*

4. † A deed; an action; a *gest*.

I have a *jest* to execute that I cannot manage alone. *Shak.*

— In *jest*, for mere sport or diversion; not in truth and reality; not in earnest.

And given in earnest what I begged in *jest*. *Shak.*

Jest (jest), *v.i.* 1. To make merriment by words or actions; to say something intended to amuse or cause laughter; to talk jokingly; to joke.

Jest not with a rude man, lest thy ancestors be disgraced. *Ecclesi. viii. 4.*

2. † To play a part in a mask.

As gentle and as jocund as to *jest*
Go I to fight. *Shak.*

Jest (jest), *v.t.* 1. To utter in jest or sport. If jest is in you, let the jest be *jested*. *Ruskin.*

Jest-book (jest/buk), *n.* A book containing a collection of jests, jokes, or funny anecdotes.

Jestee (jést'é), *n.* The person on whom a jest is passed. [Rare.]

The mortgager and mortgagee differ, the one from the other, not more in length of purse, than the jester and *jestee* do in that of memory. *Sterne.*

Jester (jést'ér), *n.* 1. A person given to jesting, sportive talk, and merry pranks.

Jesters do oft prove prophets. *Shak.*

The skipping king he ambled up and down
With shallow *jesters* and rash bavin wits. *Shak.*

2. A buffoon; a merry-andrew; a person formerly retained by persons of rank to make sport for them. The professional jesters, at least those of older times, usually wore a motley or parti-coloured coat, breeches and hose in one, and a cap or cowl of gay colours furnished with bells and asses' ears, or crowned with a cock's comb. The jesters at the courts of some sovereigns were men of no small importance, and often had much influence with their masters. The last jester in this country regularly attached to the royal household seems to have been Archie Armstrong, the jester of James I. and Charles I.

Why, he is the prince's *jester*: a very dull fool. *Shak.*
Feste, the *jester*, my lord; a fool that the lady Olivia's father took much delight in. *Shak.*

Some writings and *jest-mongers* still remain
For fools to laugh at. *F. Baillie.*

Jesuite (jéz'ü-át), *n.* See HIERONIMIAN.

Jesuit (jéz'ü-it), *n.* 1. One of a religious order founded by Ignatius Loyola in the

Jessant de lis.

sixteenth century. The Jesuits form the most celebrated of all the Roman Catholic religious orders; they have ever since their origin been one of the main bulwarks of the Church of Rome, and have exercised immense influence in the destinies of the Christian world. So formidable and dangerous was their political influence supposed to be, even in Roman Catholic communities, that the troubles occasioned by their presence often ended in their expulsion. Thus, though the order was founded only in 1536, the Jesuits were driven from France in 1594, but recalled in 1605; they were expelled from England in 1604, from Venice in 1606, from France in 1764, from Spain in 1767, and from Naples in 1768. In 1773 the order was nominally (and as was supposed finally) suppressed by Pope Clement XIV. but it was revived in 1814. They have since been expelled from various countries. The body is divided into four classes: (1) Professors, who, having passed through all preparatory stages, which commonly extend over ten or twelve years, or even a longer period, have solemnly taken the vows, including obedience to the pope; (2) Coadjutors, spiritual and temporal; the former, who have completed their studies and been admitted to holy orders, being designed to assist the professed in preaching, teaching, &c.; the latter being lay brothers, to whom menial offices are committed; (3) Scholastics, who have passed through the novitiate, are engaged for a long series of years either in pursuing their own studies or in teaching in the various schools of the order; (4) Novices, who are engaged for two years exclusively in spiritual exercises, prayer, meditation, ascetic reading, or ascetic exercises, and generally in a course of disciplinary studies.—2. [From the Jesuits being generally permitted to use art and intrigue in promoting or accomplishing their purposes.] A crafty person; an intriguer.

Jesuit (jēz'ū-ī), *v. t.* To conform to the principles of the Jesuits; to make a Jesuit of.

Jesuitess (jēz'ū-ī-ēs), *n.* One of an order of nuns established on the principles of the Jesuits, but suppressed by Urban VIII. in 1630.

(d) In *rail.* the place where the ends of two rails meet, or the mode in which they are connected. (e) In *carp.* and *joinery*, the place where or the mode in which one piece of timber is connected with another. Pieces of timber are framed and joined to one another most generally by mortises and tenons, of which there are several kinds, and by iron straps and bolts. Joints receive various names according to their forms and uses.—A *longitudinal joint* is one in which the common seam runs parallel with the fibres of both.—A *butting* or *butt joint* is one in which the plane of the joint is at right angles to the fibres, and the fibres of both pieces in the same straight line.—A *square joint* is one in which the plane of the joint is at right angles to the fibres of one piece, and parallel to those of the other.—A *bevel joint* is a joint in which the plane of the joint is parallel to the fibres of one piece, and oblique to those of the other.—A *mitre joint* is one in which the plane of the joint makes oblique angles with both pieces.—*Dove-tail joint*. See DOVE-TAIL.—*Scarf joint*. See SCARF.—See also MORTISE, TENON.—A *universal joint*, in *mech.* an arrangement by which one part of a machine may be made to move freely in all directions in relation to another. A familiar example is afforded by the well-known ball-and-socket joint, which consists of a solid working into a hollow sphere. A

Universal Joints (single and double).

very ingenious contrivance, called from the name of the inventor, Hooke's universal joint, is frequently employed for transferring the rotation of one axis to another when the two are not in the same straight line. In fig. 1, the ends of the shafts *a* and *b* are each formed into a semicircular arc, and connected by means of a cross *c*. This joint

ceases to act when the angle between the shafts is less than 140° and the motion transmitted is variable in proportion as the angle diminishes. These disadvantages are corrected by using the double joint, fig. 2, in which two crosses are employed, and connected by a separate link *d*.—*Out of joint*, dislocated, as when the head of a bone is displaced from its socket; hence, figuratively, confused; disordered.

The jaundiced eye;
Eye, to which all order festers, all things here are out of joint. Tennyson.

2. In *geol.* a fissure or line of parting in rocks at any angle to the plane of stratification.

J, Joints. c, Cracks.

The partings which divide columnar basalt into prisms are *joints*. See CLEAVAGE.

In regard to *joints*, they are natural fissures which often traverse rocks in straight or well-defined lines. The joints are straight or chinks, often slightly open, and passing not only through layers of successive deposition but also through balls of limestone or other matter. Lyell.

Jump (jump), *a.* Neat; close; exact; nicely fitting. 'Jump names.' *B. Jonson*.

Jump (jump), *n.* [*Fr. jupe*, a long petticoat or skirt; *It. giubba*, from *Ar. jubbah*, a kind of outer garment.] 1. A jacket or loose coat reaching to the thighs, buttoned down before, open or slit up half way behind, with sleeves to the wrist.—2. *pl.* A sort of bodice used instead of stays.

Bless me, Mr. Carmine, don't mind my shape this bout, for I'm only in *jumps*. *Foot.*

Jump-coupling (jump'ku-pl-ing), *n.* In *mech.* see *THIMBLE-COUPPING*.

Juniper (jûm'pér), *n.* One who or that which jumps. (a) A long iron chisel pointed with steel used by masons and miners for boring holes in stones and rocks, as in cases when they are to be split or blasted by an explosive. It receives its name from its motion when used. (b) A maggot or larva of the cheese-fly or *Piophilæ casei*. See *CHEESE-FLY*. (c) One of a sect of fanatics among the Calvinistic Methodists and others in Wales, from their violent agitations and motions during the time of divine worship. (d) In the United States, a rude kind of sleigh: usually, a simple box on runners, especially on runners which are parts of the poles forming the thills, and the middle portions of which are made thinner so as

to bend. (e) One who jumps a claim. [United States and Australia.] (f) [*Comp. jump, a jacket.*] A fur under-jacket. *Kane*. **Jumping-deer** (jump'ing-dér), *n.* The black-tailed deer (*Cervus lewisii*), found in the United States to the west of the Mississippi.

Jumping-hare (jump'ing-här), *n.* See *HE-LAMYS*.

Jumping-rat (jump'ing-rat), *n.* See *HE-LAMYS*.

Jump-seat (jump'sët), *n.* A carriage-seat so constructed that it can be used as a single or double seat; a carriage having a movable seat.

Jump-weld (jump'weld), *n.* A butt-weld (which see).

Juncaceæ (jung-kä'sê-ê), *n. pl.* The rush order, a small natural order of endogenous plants, so named from the typical genus *Juncus*. It is principally composed of obscure herbaceous plants with brown or green glumaceous hexandrous flowers, the perianth being in two series, as in *Liliacæ*, but calycine instead of petaloid. The embryo is in most *Juncaceæ* small and erect from the base of the seed, while in *Liliacæ* it is very variously placed with regard to the hilum, rarely absolutely basal. The order forms one of the transitions from complete endogens to the imperfect glumaceous form of that class. The plants of this order are chiefly found in the temperate or colder parts of the world. They are stemless herbs, or possess a slender, rarely stout, stem, the leaves being narrow with striate nerves. They are often planted to strengthen sea and river walls and embankments. Some of them, as the common rush, are employed for making mats, chair-bottoms, and brooms. The pith of several species is used for lamp and candle wicks.

Juncaceous (jung-kä'shus), *a.* In *bot.* pertaining to or resembling the *Juncaceæ*, or those plants of which the rush is the type; juncous.

Juncaginaceæ (jung-ka-jin-ä'sê-ê), *n. pl.* The arrow-grass order, a small and unimportant natural order of endogenous plants, with small, usually greenish, hermaphrodite or dioecious flowers in spikes or racemes, and narrow sheathing radical leaves, inhabiting marshy places in temperate or cold regions. The genera *Triglochin* and *Scheuchzeria* are represented in Britain.

Juncate (jung'kät), *n.* The original form of *Juncet* (which see).

Juncite (jun'sit), *n.* [*L. juncus*, a rush.] In *geol.* a striated, grooved, and tapering rush-like fragment of a leaf occurring in the Devonian formation.

Juncous (jung'kus), *a.* [*L. juncosus*, from *juncus*, a rush.] Full of rushes; resembling rushes; juncaceous. [*Rare.*]

Junction (jung'kshon), *n.* [*From L. junctio*, from *jungo*. See *JOIN*.] 1. The act or operation of joining; the state of being joined; union; coalition; combination; as, the *junction* of two armies or detachments. 2. The place or point of union; joint; juncture; specifically, the place where two or more railways meet; as, Camden *Junction*.

Juncture (jung'ktür), *n.* [*L. junctura*, from *jungo*, to join. 1. A joining; union; amity. 'The *juncture* of hearts.' *Bikon Basilike*. 2. The line or point at which two bodies are joined; a seam; a joint or articulation.—3. A point of time; particularly, a point rendered critical or important by a concurrence of circumstances.

In such a *juncture* what can the most plausible and refined philosophy do? *Berkeley*.

Juncus (jung'kus), *n.* [*L.*] A large and widely distributed genus of plants, the type of the nat. order *Juncaceæ* (which see) or rush tribe. They have a rigid habit, and small greenish or brown flowers, arranged in heads or panicles. They inhabit bogs and wet places, abounding in the temperate and arctic zones. The stems of several species are made into mats, and the pith is used for lamp and candle wicks.

Jundie, *v.t.* or *i.* To jog with the elbow; to jostle. [*Scotch.*]

June (jun), *n.* [*L. Junius*, perhaps after *L. Junius Brutus*, who abolished regal power at Rome, or from some other member of this family; in any case from some root as *junior*, *L. juvenis*, a youth; *E. young*.] The sixth month of the year, when the sun enters the sign of Cancer.

Juneating (jun'at-ing), *n.* A kind of early apple, said to ripen in *June*; a jenneting.

June-berry (jun'be-ri), *n.* [From the fruit

ripening in June.] The service-berry (which see).

Jungermanniaceæ (jung-ger-man'ni-ä'-sé-é), *n. pl.* [In honour of the German botanist L. *Jungermann*, who died in 1653.] A group of cryptogams, closely resembling mosses, usually regarded as a sub-order of Hepaticæ, but sometimes classed as a separate natural order. They are distinguished by the solitary capsules which for the most part split into a definite number of valves, and are filled with a mass of spiral elaters and spores. Most of them have distinct leaves. The species inhabit the trunks of trees or damp earth, in cool moist climates.

Jungle (jung'gl), *n.* [Hind. *jāngal*, desert, forest, jungle.] Properly an Indian term applied to a desert and uncultivated region whether covered with wood and dense vegetation or not; a sparsely inhabited region; in English generally applied to land covered with forest-trees, thick, impenetrable brushwood, or any coarse, rank, vegetation.

The operations of the Kaffirs have been carried on by the occupation of extensive regions, which in some places are called *jungle*, in others bush; but in reality it is thickest wood that can be found anywhere.

Duke of Wellington.

Jungle-fever (jung'gl-fē-ver), *n.* A disease prevalent in the East Indies and other tropical regions, a severe variety of remittent fever. It is characterized by the recurrence of paroxysms and of cold and hot stages. The remissions occur usually in the morning and last from eight to twelve hours, the fever being most typically developed at night. Called also *Bil-fever*.

Jungle-fowl (jung'gl-foul), *n.* A name given to two birds, the one a native of Australia, the other of India. The jungle-fowl of Australia is *Megapodius cumulus*. (See MEGAPODIUS.) The Indian jungle-fowl is *Gallus Sonneratii*, the first species of the genus *Gallus* known in its wild state to naturalists. It is abundant in the higher wooded districts of India, is about equal in size to an ordinary domestic fowl, but more slender and graceful in its form; the comb of the male is large, and its margin broken; the colours are rich and beautiful; the hackle feathers are ornamented by flat horny plates of a golden orange.

Jungly (jung'gli), *a.* Of the nature of a jungle; consisting of jungles; abounding with jungles.

Jungly-gau (jung'gli-gou), *n.* *Bos sylhetanus*, a species of ox inhabiting Sylhet and other mountainous parts of the north-east of India. It is nearly allied to the gayal and to the common ox, and has more the appearance of some of the European domesticated breeds of oxen than any of the other wild oxen of Asia.

Junior (jū'ni-ēr), *a.* [L., contracted from *juvenior*, comp. of *juvenis*, young.] Younger; not as old as another. It is applied to distinguish the younger of two persons bearing the same name in one family or town, and opposed to *senior*; as, John Smith, *junior*. —2. Lower or younger in standing, as in a profession, especially the bar; as, a *junior* counsel; a *junior* partner in a company.

Junior (jū'ni-ēr), *n.* 1. A person younger than another. 'The fools, my *juniors* by a year.' *Swift*. —2. One of shorter or inferior standing in his profession than another, who is called his *senior*; specifically, naib of members of the bar.

He had been retained as Mr. Sergeant Snubbin's *junior*. *Dickens.*

Juniority (jū'ni-or'i-ti), *n.* The state of being junior.

Juniorship (jū'ni-ēr-ship), *n.* State of being junior; juniority.

Juniper (jū'ni-pēr), *n.* [L. *juniperus*; Fr. *genévre*.] The name of the hardy exogenous evergreen trees and shrubs of the genus *Juniperus*, chiefly natives of the northern parts of the world. They belong to the nat. order Conifere and the group Gymnospermæ of the sub-class Monochlamydeæ. About twenty species are known, the most important of which are the *J. communis*, *J. sabina* or *savin*, *J. virginiana*, and *J. bermudiana*. *J. communis*, or common juniper, is a common bush growing wild in all the northern parts of Europe, and abundant in the mountains of Wales, Scotland, and Ireland, and on low ground in the northern parts. The berries require two years to come to maturity, when they assume a bluish-black colour. They are

used extensively in Holland in the preparation of gin, and in medicine as a powerful diuretic. When distilled with water they

Juniper (*Juniperus communis*).

yield an essential oil, which is said to be the most powerful of all diuretics in doses of four drops. *J. sabina* or *savin* yields a most powerful diuretic, and an oil which is a local irritant. *J. virginiana* and *J. bermudiana* are trees; the wood of the latter is much used by cabinet-makers, and in the manufacture of pencils.

Juniper-resin (jū'ni-pēr-re-zin), *n.* Sandarac (which see).

Junk (jungk), *n.* [Fr. *jonc*, L. *juncus*, a bulrush, of which ropes were made in early ages.] 1. Pieces of old cable or old cordage used for making points, gaskets, mats, &c., and when untwisted and picked to pieces, forming oakum for filling the seams of ships. 2. Salt beef supplied to vessels for long voyages; so called from its resembling old ropes' ends in hardness and toughness.

The purser's *junk* had become tough. *Dickens.*

Junk (jungk), *n.* [Fr. *jonque*, Sp. and Pg. *juncos*, said to be from Chinese *chowen*, a vessel.] A flat-bottomed ship used in China and Japan, often of large dimensions. It has a high fore-castle and poop, and ordinarily three masts of considerable height, each mast being in one piece.

Jupe (jūp), *n.* Same as *Jupon*.

Jupiter (jū'pi-tēr), *n.* [L., from *Jovis pater* — *Jovis* for *Diavis*, from a root signifying light, day, heavens (see *DIRTY*), and *pater*, father.] 1. The supreme deity among the Latin races in Italy, the equivalent of the Greek Zeus. He received from the Romans, whose tutelary deity he was, the titles of Optimum Maximus (Best Greatest). As

the deity presiding over the sky he was considered as the originator of all atmospheric changes. He was regarded as supreme in human affairs; he foresaw and directed the future, and sacrifices were offered up to him at the beginning of every undertaking in order to propitiate his favour. He was likewise believed to be the guardian of property, whether of the state

Jupiter, from an antique statue.

or of individuals. White, the colour of the light of day, was sacred to him; hence, white animals were offered up in sacrifice to him, his priests wore white caps, his chariot was represented as drawn by four white horses, and the consuls were dressed in white upon the occasion of their sacrificing to him when they entered upon office. He is often represented with thunderbolts in his hand, and the eagle, his favourite bird, is generally placed by the side of his throne.—2. One of the superior planets, remarkable for its brightness. Its mean diameter is about 85,000 miles; its distance from the sun 490,000,000 miles, and its period of revolution round the sun a little less than twelve years. The disc of Jupiter is always observed to be crossed in one certain direction by dark bands or belts. The planet is accompanied by four moons or satellites, which revolve about it nearly in the plane of its equator, exactly in the same manner as the moon revolves about the earth.—3. The ancient chemical name of tin, which was supposed to be under the control of the planet Jupiter.

Jupiter's-beard (jū'pī-tēr-z-berd), *n.* The houseleek (*Sempervivum tectorum*).

Jupon, Jupon (ju-pōn'), *n.* [Fr., from *jupon*, Sp. *jupon*; from *Ar. jub-bah*, a kind of outer garment.] In *anc. armour*, a tight-fitting military garment without sleeves, worn over the armour, and descending just below the hips. It has ever been the method of public *jurists* to draw a great part of the analogies on which they form the law of nations, from the principles of law which prevail in civil community. *Burke.*

Juristic, Juristical (jū-ris'tik, jū-ris'tik-al), *a.* Relating to a jurist or to jurisprudence.

Juror (jūr'er), *n.* [O. Fr. *jureur*, a sworn witness, from *jurer*, to swear.] One that serves on a jury; a jurymen: (a) one sworn to deliver the truth on the evidence given him concerning any matter in question or on trial. See *JURY*. (b) One of a body of men selected to adjudge prizes, &c., at a public exhibition.—*Juror's book*, a book or list of persons qualified to serve on juries, annually made out for each county.

Jury (jū'ri), *n.* Same as *Jury*.

Jury (jū'ri), *n.* [O. Fr. *jurie*, an assize, from Fr. *jurer*, *L. juro*, to swear.] 1. A certain number of men selected according to law, impanelled, and sworn to inquire into or to determine facts, and to declare the truth according to the evidence legally adduced. Trial by jury signifies the determination of facts in the administration of civil or criminal justice by a number of men, generally twelve, sworn to decide facts truly according to the evidence produced before them. The juries at present in use in England in the ordinary courts of justice are *grand-juries*, *petty*, *petit*, or *common juries*, and *special juries*. *Grand-juries* are exclusively incident to courts of criminal jurisdiction; their office is to examine into charges of crimes brought to them at assizes or sessions, and if satisfied that they are true, or at least that they deserve more particular examination, to return a bill of indictment against the accused, upon which he is afterward tried by the petty jury. A grand-jury must consist of twelve at the least, but in practice a greater number usually serve, and twelve must always concur in finding every indictment. *Petty* or *common juries* consist of twelve men only, and are appointed to try all cases both civil and criminal. The jury, after the proofs of a cause are summed up, unless the case be very clear, withdraw from the bar to consider regarding their verdict; and, in order to avoid intemperance and causeless delay, are kept without drink, fire, or candle, unless by permission of the judge, till they are all unanimously agreed. *Special juries* are used when the causes are of too great nicety for the discrimination of ordinary juries. Every person legally entitled to be called an esquire, every person of higher degree, as a banker or merchant, and every person occupying a private dwelling-house, or any premises, or a farm rated on certain values specified in 33 & 34 Vict. lxxvii. 6, is qualified and liable to serve on special juries. According to the law of Scotland, the number of the jury in criminal cases is fifteen; and the majority of that number determine what the verdict shall be. In civil cases, and in revenue cases before the Court of Exchequer, the number of the jury is twelve, and the jury are not required to be unanimously agreed in their verdict. In all cases of high treason the jury also consists of twelve, and their verdict must be unanimous, as in England. In Scotland there is no grand-jury.—*Challenge of jurors*. See *CHALLENGE*, 7.—2. A body of men selected to adjudge prizes, &c., at a public exhibition.

Jury (jū'ri), *a.* [Perhaps from Pg. *ajuda*, help.] *Naut.* a term applied to a thing employed to serve temporarily in room of something lost; as, a *jury-mast*; a *jury-rudder*.

7. In accordance with justice or equity; equitable; due; merited; as, a *just* recompense or reward. — 8. Full; reaching the common standard; complete.

So that once the skirmish was like to have come to a *just* battle. *Knolles.*

He was a comely personage, a little above *just* stature. *Bacon.*

— *Righteous, Just.* See under *RIGHTEOUS*.

Just (jus't), *n.* That which is just; justice. 'Strength from truth divided and from *just*.' *Milton.*

Just (jus't), *adv.* 1. Close or closely; near or nearly in place; as, he stood *just* by the speaker and heard what he said. — 2. Exactly or nearly in time; almost; immediately; immediately before or after; as, *just* at that moment he arose and fled. — 3. Exactly; nicely; accurately; as, they remained *just* of the same opinion.

'Tis with our judgments as our watches; none
Go *just* alike, yet each believes his own. *Pope.*

And having *just* enough, not covet more. *Dryden.*

4. Narrowly; barely; only; as, he *just* escaped without injury. — *But just*, barely; scarcely.

Just (jus't), *n.* See *JOUST*.

Just (jus't), *v.t.* Same as *Joust*.

Juste-millen (zhist-mē-lye), *n.* [Fr.] The golden mean.] The true mean; specifically applied to that method of administering government which consists in maintaining itself by moderation and conciliation between the extreme parties on either side.

Justice (jus'tis), *n.* [Fr. from *L. justitia*, from *justus*, *just*.] 1. The quality of being

just; just conduct; justness: (a) the rendering to every one what is his due; practical conformity to the laws and to principles of rectitude in conduct; honesty; integrity; uprightness. (b) Conformity to truth and reality; fair representation of facts respecting merit or demerit; impartiality; as, in criticisms, narrations, history, or discourse, it is a duty to do *justice* to every man, whether friend or foe. (c) Agreeableness to right; rightfulness; as, he proved the *justice* of his claim. 2. Just treatment; vindication of right; requital of desert; merited reward or punishment.

Thou shalt have *justice* at his hands. *Shak.*

Examples of *justice* must be made for terror to some. *Bacon.*

If my speech offend a noble heart,
Thy arm may do thee *justice*. *Shak.*

3. A person commissioned to hold courts, or to try and decide controversies and administer justice to individuals; a judge, especially one of a superior court, as in the English Supreme Court of Judicature.

— *Justices of the peace*, magistrates specially entrusted with the conservation of the peace. In Britain they are unpaid magistrates holding their commission from the crown, who try offences of a trivial sort, and discharge numerous other functions.

— *Justices of the quorum*, justices nominated expressly, so that certain business cannot be transacted without their presence. — *Lord Chief Justice*, the title given in England to the chief judge or justice of the Queen's Bench division of the High Court of Justice, who is also *ex officio* one of the judges of the Court of Appeal. There are also Chief Justices in the Colonies and the U. States.

— *Lord Justice-clerk of Scotland*, the vice-president of the Court of Justiciary, and the presiding judge of that court in absence of the lord president of the Court of Session. He is one of the officers of state for Scotland, and one of the commissioners for keeping the Scottish regalia. He is always one of the senators of the College of Justice, and president of the second division of the Court of Session. — *Lord Justice-general*, the highest judge in Scotland, also called the *Lord President of the Court of Session*. Formerly the office of justice-general was a sinecure and not a judicial one; but the title is now, since 1831, associated with that of the lord president. — *Lords-justices*, persons formerly appointed by the sovereign to act for a time as his substitute in the supreme government, either of the whole kingdom or of a part of it. Thus when George I. went abroad in May, 1719, he intrusted the government during his absence to thirteen lords-justices, and nineteen lords-justices and guardians were also appointed when George IV. went to Hanover in 1821. The lord-lieutenant of Ireland is a familiar example of a lord-justice. — *Jedwood or Jeddart justice*, a term applied in Scotland to the act of executing a prisoner and trying him afterwards: from *Jedburgh*, a Scotch border town, where many of the border raiders were said to have been hanged without even the formality of a trial.

We will have *Jedwood justice*—hang in haste and try at leisure. *Sir W. Scott.*

Justice (jus'tis), *v.t.* To administer justice to.

The king delivered him to the French king to be *justified* by him at his pleasure. *Hayward.*

Justiceable (jus'tis-a-bl), *a.* Liable to account in a court of justice.

Justice Ayre. [See *ERRA*.] In *Scots law*, a circuit through the kingdom made by the lords of justiciary for the distribution of justice.

Justicement (jus'tis-ment), *n.* Administration of justice; procedure in courts.

Justicer (jus'tis-ēr), *n.* An administrator of justice.

O give me cord, or knife, or poison,
Some upright *justicer*! *Shak.*

Justiceship (jus'tis-ship), *n.* The office or dignity of a justice.

Justicia (jus'ti-shi-a), *n.* [From *J. Justice*, the name of an eminent horticulturist.] A genus of ornamental flowering plants of the nat. order Acanthaceae, growing in damp tropical and sub-tropical regions, especially in India and South Africa. In the genus as defined by Linnaeus numerous medicinal plants were included, such as *J. nasuta*, now *Rhinacanthus commutatus*, used in India in the treatment of skin diseases, and *J. (now Andropogon) paniculata*, a well known bitter. They are herbs or shrubs,

with terminal spikes of often handsome flowers.

Justifiable (jus-ti'shi-a-bl), *a.* Proper to be brought before a court of justice.

Justiciary, Justiciar (jus-ti'shi-a-ri, jus-ti'shi-ēr), *n.* [L. *justiciarius*.] 1. An administrator of justice. — 2. An officer instituted by William the Conqueror; a lord chief-justice. The office of chief justiciary was one of high importance in the early history of English jurisprudence. He presided in the king's court, and in the exchequer, and his authority extended over all other courts. He was *ex officio* regent of the kingdom in the king's absence. — 3. † One that boasts of the justice of his own act.

I believe it would be no hard matter to unravel and run through most of the monastic austerities and fastings of many religious operators and splendid *Justiciaries*. *South.*

— *High Court of Justiciary*, the supreme criminal tribunal of Scotland. Its judges are the lord justice-general, lord justice-clerk, and five of the lords of session, appointed by patent. Its decisions are final.

Justices (jus-ti'si-ēz), *n.* In *English law*, a writ directed to the sheriff empowering him to hold plea of debt in his county court for any sum, his usual jurisdiction being limited to sums under 40s.: now obsolete.

Justifiable (jus-ti-fi-a-bl), *a.* Capable of being justified or proved to be just; capable of being pronounced just; defensible; vindicable; as, no breach of law or moral obligation is *justifiable*.

Just are the ways of God,
And *justifiable* to men. *Milton.*

— *Justifiable homicide*. See *HOMICIDE*. — *Syn.* Defensible, vindicable, warrantable, excusable.

Justifiableness (jus-ti-fi-a-bl-nes), *n.* The quality of being justifiable; rectitude; possibility of being defended or vindicated.

Justifiably (jus-ti-fi-a-bl), *adv.* In a manner that admits of vindication or justification; rightly.

Justification (jus-ti-fi-kā'shon), *n.* [Fr. from *justifier*, to justify.] The act of justifying or state of being justified: (a) a showing to be just or conformable to law, rectitude, or propriety; vindication; defence; as, the court listened to the evidence and arguments in *justification* of the prisoner's conduct.

I hope, for my brother's *justification*, he wrote this but as an essay or taste of my virtue. *Shak.*

Specifically, (b) in *law*, the showing of a sufficient reason in court why a defendant did what he is called to answer. Pleas in justification must set forth some special matter. (c) In *theol.* the act by which a person is accounted just or righteous in the sight of God, or placed in a state of salvation; remission of sin and absolution from guilt and punishment.

In such righteousness
To them by faith imputed, they may find
Justification towards God, and peace
Of conscience. *Milton.*

(d) The act of adjusting or making exact; the act of causing the various parts of a complex object to fit together; as, in *printing*, the putting equal space between the words in each line, making the lines of precisely the same length, and the like. (e) The act of judging; condemnation; punishment with death; execution. [Scotch.]

Justificatory (jus-ti-fi-kā-tō-ri), *a.* Justifying; having power to justify; justificatory.

Justificator (jus-ti-fi-kāt-ēr), *n.* One who justifies, as, in *law*, a purgator who by oath justified the innocent; also, a jurymen, because the jurymen justify that party for whom they deliver their verdict.

Justificatory (jus-ti-fi-kā-tō-ri), *a.* Vindicatory; defensory.

Justifier (jus-ti-fi-ēr), *n.* One who justifies: (a) one who vindicates, supports, or defends. (b) One who pardons and absolves from guilt and punishment.

That he might be just, and the *justifier* of him which believeth in Jesus. *Rom. iii. 26.*

Justify (jus-ti-fi), *v.t.* pret. & pp. *justified*; ppr. *justifying*. [Fr. *justifier*; *L. justus*, just, and *facio*, to make.] 1. To prove or show to be just or conformable to law, right, justice, propriety, or duty; to defend or maintain; to vindicate as right; to warrant.

Curable evils *justify* clamorous complaints; the incurable *justify* only prayers. *De Quincey.*

2. To declare free from guilt or blame; to absolve; to clear.

I cannot *justify* whom the law condemns. *Shak.*

3. In *theol.* to pardon and clear from guilt; to treat as just, though guilty and deserving punishment; to pardon. — 4. To prove by evidence; to verify; to establish; as, to *justify* the truth of an observation. *Addison*.
I here could pluck his highness' frown upon you,
And *justify* you traitors. *Shak.*

5. To make exact; to cause to fit, as the parts of a complex object; to adjust, as in printing. — See JUSTIFICATION, (d). — 6. To judge; to condemn; to punish with death; to execute. [Scotch.]

It was concluded by the king and counsel that he should be *justified* on a certain day. *Friscottie*.

—To *justify* bail, in *law*, to prove the sufficiency of bail or sureties in point of property, &c. — SYN. To defend, vindicate, maintain, exonerate, excuse, exculpate, absolve.

Justify (jus'ti-fi), *v. t.* To agree; to suit; to conform exactly; to form an even surface or true line with something else.

Justinian (jus-tin'i-an), *a.* Belonging to the Institutes or laws of the Roman emperor Justinian.

Justinianist (jus-tin'i-an-ist), *n.* One who is deeply read in the Institutes of Justinian; one acquainted with civil law.

Justle (jus'l), *v. i.* pret. & pp. *justled*; ppr. *justling*. [See JOSTLE.] To run against; to encounter; to strike against; to clash; to jostle.

The chariots shall rage in the streets, they shall *justle* one against another in the broad ways. *Nah. ii. 4.*

Jynold+ (jim'öld), *a.* Same as *Gimnal*.

Jysse (jis), *n.* See GIS.

K.

K, the eleventh letter and the eighth consonant of the English alphabet, representing one of the sounds of the original Indo-European alphabet. The letter was commonly employed in Greek, and in the oldest period of Latin, though hardly used in classical Latin. Nor is it used by the Romance languages except in a few borrowed words. In the Teutonic languages, on the other hand, it is much employed. In Anglo-Saxon *k* was occasionally used, but *c* was regularly employed for the same sound, being always hard (even before *e* and *i*). Up till the thirteenth century this letter was seldom used. It gradually became commoner, however, when *c* had partly lost its own special force, and now has as its most characteristic function the representation of the hard guttural sound before the vowels *e* and *i*, *c* being written before *a*, *o*, and *u*. At the end of monosyllabic stems it is very common, and if the preceding vowel sound is short this letter is in effect doubled by the insertion of *c* before it; if the simple vowel is long this is indicated by an *e* placed after the *k*. *K* has always the same sound, according to which it is classed as a guttural mute, explosive, or momentary consonant, and represents a hard or surd articulation,

produced by pressing the root of the tongue against the palate, with a depression of the lower jaw and opening of the teeth. It is closely allied to the sound of *g* in *go*, from which it differs only in the fact that it checks or stops the emission of breath instead of voice. It is less closely allied to the sound of *ng* in *ring*, which is pronounced with the same contact of the tongue with the upper part of the mouth, but the uvula is allowed to drop, and the voice goes through the nose. As already intimated, at the beginning of a syllable it is hardly found in pure English words before any other vowel except *e* and *i*. Nor is it ever doubled, *ck* being used for *kk*, as mentioned above. Formerly, *k* was added to *c* in certain words of Latin or Greek origin, as in *music*, *public*, *republic*, but is now omitted as superfluous. *Kn* forms a common initial combination in English words, but in this position the *k* is now silent, as in *know*, *knife*, *knee*, although in some districts of Britain, as in the north of Scotland, its sound is still heard, as it is in German words beginning with this combination. Before *r* or *l* as an initial combination this sound is represented by *c*, as in *cream*, *clean*, while an initial *k* sound and a *w* sound coming together are commonly

written *qu*, as *quake*, *queen* (A. Sax. *cweccan*, *cwēn*). According to Grimm's law when the same roots occur in English and Sanskrit, or the languages with which Sanskrit usually agrees, Greek, Latin, &c., the English *k* (like that of the Gothic and Low German dialects generally) represents the *g* of the series of languages mentioned, and when the same roots occur in English and Old High German, the English *k* represents the Old High German *ch*; thus, *E. kin* is the Gr. *genos*, L. *genus*, and the O. H. G. *chunni*. — As a contraction *K* stands for *Knicht*, as *K.B.*, Knight of the Bath; *K.G.*, Knight of the Garter; *K.C.B.*, Knight Commander of the Bath; *K.T.*, Knight of the Thistle; and *K.H.*, Knight of Hanover.

Kaiser (ká'zér), *n.* [G.] An emperor. See *CESAR*.

Kakapo (ká'ká-po), *n.* [Native name.] The owl-parrot, a New Zealand parrot, the *Strigops habroptilus*, much resembling an owl, but of a greenish or mottled hue. It is nocturnal in its habits, lying in holes during the day, and is the only known bird having large wings which does not use them for flight. It appears probable that it will soon be extinct. This and *S. greyi* are the only known species of the genus.

Kakarali (ká'ká-rá'il), *n.* The wood of *Leceythis olaria*, a tree common in Demerara, which is very durable in salt water, possessing the quality of resisting the depredations of the sea-worm and barnacle.

Kakodyle, Kakodyl (ká'kó-díl, ká'kó-díl), *n.* [Gr. *kakos*, bad, and *odôdê*, smell.] (As *C₂H₄*) A metalloïd radical, a compound of arsenic, hydrogen, and carbon. It was first obtained in a separate state by Bunsen, and formed the second instance of the isolation of a compound radical, that of cyanogen by Gay-Lussac being the first. It is a clear liquid, heavier than water, and refracting light strongly. Its smell is insupportably offensive (whence its name), and its vapour is highly poisonous. It is spontaneously inflammable in air. Alkarsine is the protoxide of kakodyle. Written also *Kakodule*, *Cacodyle*. See *ALKARSINE*.

Kakoxene, Kakoxine (ká'kóks'en, ká'kóks'in), *n.* [Gr. *kakos*, evil, and *xenos*, a stranger, or guest.] A mineral occurring in brown or red radiated crystals in the ironstone of Žbirow, in Bohemia. It contains phosphoric acid in combination with peroxide of iron, about 30 per cent. of water of crystallization, and sometimes a little magnesia, lime, and silica. Written also *Cacoxene* and *Cacoxinite*.

the free end surmounted with a polished knob, be set vibrating by a blow or by bending it, beautiful curves of vibration will be exhibited to the eye.

Kaleidoscope (ká-lí'dó-skóp), *n.* [Gr. *kalos*, beautiful, *eidos*, appearance, form, figure, and *skopeô*, to view.] An optical instrument invented by Sir D. Brewster, for the purpose of creating and exhibiting, by reflections, a variety of beautiful colours and symmetrical forms, and enabling the observer to render permanent such as may appear appropriate for any branch of the ornamental arts. In its simplest form the instrument consists of a tube containing two reflecting surfaces inclined to each other at any angle which is an aliquot part of 360°. The eye-glass placed immediately against one end of the mirrors as well as a glass similarly situated at their other end are of clear glass; the tube is continued a little beyond this second glass, and its termination is closed by a disc of ground glass. In the cell thus formed are placed beads, pieces of coloured glass or other small, bright-coloured, diaphanous objects, and the change produced in their positions gives rise to the different symmetrical figures.

Kaleidoscopic, Kaleidoscopical (ká-lí'dó-skóp'ík, ká-lí'dó-skóp'ík-al), *a.* Relating to the kaleidoscope.

Kalendar, Kalendarial (kal'en-dér, kal-en-dér-i-al), *a.* See *CALENDAR, CALENDARIAL*.

Kalender (kal'en-dér), *n.* A sort of dervise. See *CALENDER*.

Kalender, t n. A calendar; a guide or director. *Chaucer*.

Kalends (kal'endz), *a.* Same as *Calends*.

Kali (ká'li), *n.* A Hindu divinity; one of the names of Durga (which see).

Kali (ká'li), *n.* [Ar. *qali*. See *ALKALI*.] A plant, a species of *Salsola* or glasswort the ashes of which are used in making glass. See *ALKALI*. Potash or potassa is termed *kali* by the German chemists.

Kalif (ká'li), *n.* See *CALIF*.

Kaliform (ká'li-form), *a.* Formed like kali or glasswort.

Kaligenous (ká-lí-jen-us), *a.* [From *Kali*, and *gennáo*, to generate.] Producing alkalies; specifically applied to certain metals which form alkalies with oxygen. The true kaligenous metals are potassium and sodium.

Kalium (ká'li-um), *n.* [G. *kali*, potash. See *KALI*.] Another name for potassium, that from which its symbol K is derived.

Kaliyuga (ká-lí-yú'ga), *n.* [Skr., age of *Kali*.] The last of the four Hindu periods contained in the great Yuga, equal to the iron age of classic mythology. It consisted of 432,000 solar-sidereal years, and began some thousands of years before the Christian era.

Kalki (ká'ká), *n.* An avatar or incarnation of Vishnu, which it is considered will take place about the close of the Kaliyuga age, when all whose minds are given up to wickedness shall be annihilated, and righteousness established on earth; and the minds of those who live at the close of that age shall be awakened and be as pellucid as crystal.

Kalkulynge, t n. Calculation. *Chaucer*.

Kalligraphy (kal-lí-grá-fí), *n.* See *CALLIGRAPHY*.

Kalliope (ká-lí'o-pé), *n.* Same as *Calliope*.

Kalmia (ká'ni-a), *n.* [After Peter Kalm, a Swedish botanist of the eighteenth century.] The name of a genus of smooth evergreen shrubs, natives of North America, belonging to the nat. order Ericaceæ, having entire, opposite or alternate, coriaceous, oblong or linear leaves, naked buds, and handsome broadly bell-shaped or wheel-shaped showy flowers. At least one species (*K. angustifolia*) is poisonous to sheep; the species most generally cultivated is *K. latifolia*, the wood of which is hard and of considerable use.

Kalmuck (ká'muk), *n.* [From the people called *Kalmucks* or *Calmucks*.] 1. A kind of shaggy cloth resembling bear-skin.—2. A coarse cotton fabric made of various colours in Prussia. *Stimmonds*.

Kalong (ká'long), *n.* [Native name.] A name given to several species of fox-bats; specifically to the great frugivorous fox-bat of India.

Kalotyte (ká'lo-tip), *n.* See *CALOTYTE*.

Kaloyer (ká-loi'er), *n.* See *CALOYER*.

Kalpa (ká'pa), *n.* In *Hindu chron.* a day or according to others a day and night of Brahma, or a period of 4,320,000,000 or 8,040,000,000 solar-sidereal years. According to some the number of kalpas is infinite; others limit them to thirty. A great kalpa, instead of a day, comprises the life of Brahma.

Kalpa-Sûtra (kal-pa-sû'tra), *n.* In *Vedic*

mentioned.—3. A broth made in Scotland in which kail is a leading ingredient; hence any soup, no matter of what composed, and by a further extension dinner generally.—*To give one his kail through the reek*, to give him a severe reproof; to subject one to a complete scolding. [Scotch.]

Kail-blade (káil-blád), *n.* A colewort-leaf. [Scotch.]

Kail-runt (káil'runt), *n.* The stem of the colewort. [Scotch.]

Kail-worm (káil'werm), *n.* A caterpillar. [Scotch.]

Kail-yard (káil'yárd), *n.* A cabbage-garden. [Scotch.]

Kaim, Kame (kám), *n.* [A form of *Comb*. Comp. *Ice* *kám*, a comb, a crest or ridge of a hill.] [Scotch.] 1. A comb; a honeycomb.—2. A low ridge; the crest of a hill; specifically, in *geol.*, a narrow, elongated, generally flat-topped ridge of gravel of the post-glacial period, occurring scattered over the lower portions of the great valleys of Scotland and Ireland. Called also *Eskar*, and in Sweden *úsar*. See *ESKAR*.—3. A camp or fortress.

Kaim, Kame (kám), *v.t.* To comb. [Scotch.]

Kain, Cane (kán), *n.* [L.L. *cana*, *canum*, a hair or tribute, from Gael. *ceann*, the head, poll-money.] In Scotland, a duty paid by a tenant to his landlord, as poultry, eggs, &c., deliverable in terms of his lease; hence any tax, tribute, or duty exacted.

Kainite (ká'nit), *n.* [Gr. *kainos*, recent.] A mineral found in Germany, since recent times used as a manure, chiefly for the potash it contains.

Kainozoic (ká-no-zó'ík), *a.* Same as *Cainozoic*.

Kaiser (ká'zér), *n.* [G.] An emperor. See *CESAR*.

Kakapo (ká'ká-po), *n.* [Native name.] The owl-parrot, a New Zealand parrot, the *Strigops habroptilus*, much resembling an owl, but of a greenish or mottled hue. It is nocturnal in its habits, lying in holes during the day, and is the only known bird having large wings which does not use them for flight. It appears probable that it will soon be extinct. This and *S. greyi* are the only known species of the genus.

Kakarali (ká'ká-rá'il), *n.* The wood of *Leceythis olaria*, a tree common in Demerara, which is very durable in salt water, possessing the quality of resisting the depredations of the sea-worm and barnacle.

Kakodyle, Kakodyl (ká'kó-díl, ká'kó-díl), *n.* [Gr. *kakos*, bad, and *odôdê*, smell.] (As *C₂H₄*) A metalloïd radical, a compound of arsenic, hydrogen, and carbon. It was first obtained in a separate state by Bunsen, and formed the second instance of the isolation of a compound radical, that of cyanogen by Gay-Lussac being the first. It is a clear liquid, heavier than water, and refracting light strongly. Its smell is insupportably offensive (whence its name), and its vapour is highly poisonous. It is spontaneously inflammable in air. Alkarsine is the protoxide of kakodyle. Written also *Kakodule*, *Cacodyle*. See *ALKARSINE*.

Kakoxene, Kakoxine (ká'kóks'en, ká'kóks'in), *n.* [Gr. *kakos*, evil, and *xenos*, a stranger, or guest.] A mineral occurring in brown or red radiated crystals in the ironstone of Žbirow, in Bohemia. It contains phosphoric acid in combination with peroxide of iron, about 30 per cent. of water of crystallization, and sometimes a little magnesia, lime, and silica. Written also *Cacoxene* and *Cacoxinite*.

Kalaf (ká'laf'), *n.* A medicated water obtained in Egypt and other parts of North Africa from the male catkins of *Salix aegyptiaca*.

Kaland (ká'land), *n.* [Probably from *L. kalendæ*, the first day of the month.] A lay fraternity which originated in Germany in the thirteenth century. The members assembled on the first of each month to pray for their deceased friends, after which they took a repast in common. The ceremonies gradually degenerated into excesses, and the fraternity was abolished.

Kale (káil), *n.* [See *COLE*.] 1. Colewort. See *KAIL*.—2. Sea-kale or *Crambe maritima*. See *CRAMBE*.

Kaleidophon, Kaleidophone (ká-lí'do-fon, ká-lí'do-fón), *n.* [Gr. *kalos*, beautiful, *eidos*, form, and *phônê*, sound.] An instrument invented by Sir Charles Wheatstone for exhibiting the vibrations of an elastic rod, if an elastic rod, fixed at one end and having

the free end surmounted with a polished knob, be set vibrating by a blow or by bending it, beautiful curves of vibration will be exhibited to the eye.

Kaleidoscope (ká-lí'dó-skóp), *n.* [Gr. *kalos*, beautiful, *eidos*, appearance, form, figure, and *skopeô*, to view.] An optical instrument invented by Sir D. Brewster, for the purpose of creating and exhibiting, by reflections, a variety of beautiful colours and symmetrical forms, and enabling the observer to render permanent such as may appear appropriate for any branch of the ornamental arts. Kerosene (ker'ó-sē-lén), *n.* [See KEROSENE.] An extremely light, volatile, liquid hydrocarbon, which first passes over when petroleum, coal-tar, &c., are distilled. It has a specific gravity of '650, a rather pleasant ethereal odour, and resembles benzole in its properties, but is much lighter, and a powerful anesthetic. A solution consisting of one grain of india-rubber dissolved in an ounce of kerosene is used as a coating fluid in the photographic dry collodion process, to make the film stick more firmly to

the plate. It has been proposed as a substitute for chloroform.

Kerosene (ker'ó-sén), *n.* [From Gr. *kēros*, wax.] A liquid hydrocarbon distilled from coals, bitumen, petroleum, &c., extensively used in America as a lamp-oil. When pure it is colourless, and its specific gravity varies from '780 to '825. It is the same as, or very closely related to, the British paraffin oil. Called also *American Paraffin Oil*, *Photogen*, and *Mineral Oil*.

Kers,† Kerse,† n. [A. Sax. *cerse* or *carse*.] A cress.—*Ne sette he not a kers*, he cared not a cress. *Chaucer.* In such expressions this word is now corrupted into *cirse*. See CURSE, *n.*

Kersen† (kér's'n), *v.t.* A corruption of *Christen*.

Fish, one good Caesar, a pump-maker,
Kersen'd him. *Beau. & Fl.*

Kersey (kér'zi), *n.* [Comp. Sc. *carsaye*, D. *karsadi*, Fr. *cariset*, *créseau*, Sw. *kersing*, *kersey*. Littré suggests that the Fr. *créseau* is from *croiser*, to cross, *croisé*, twilled.] A species of coarse woollen cloth, usually ribbed, made from long wool.

Kersey (kér'zi), *a.* 1. Consisting of kersey.

Will she with huswife's hand provide thy meat,
And every Sunday morn thy neckcloth plait,
Which o'er thy *kersey* doublet spreading wide,
In service time drew Cicily's eye aside? *Gay.*

Hence—2. Homespun; homely.

Henceforth my wooing mind shall be express'd
In russet yeas, and honest *kersey* noes. *Shak.*

side of the lumbar vertebrae, surrounded with fatty tissue. They are of a reddish-brown colour, and secrete the urine. Each

kidney consists of a cortical or outer part, and a medullary or central portion. The gland is essentially composed of numerous minute tubes, which are straight in the outer and convoluted in the central part. The tubes are lined with cells, and the cells separate the urine from the blood brought to the kidney, the urine passing in drops into the pelvis or cavity of the organ, and thence through the ureter into the bladder. 2. Sort: kind; character; disposition; temper. [Humorous.]

There are millions in the world of this man's *kidney*. *Sir R. L. Estrange*.

This sense probably arose from the fact that the kidneys with the fat surrounding them are left exposed in slaughtered animals when they are cut up, and thus they furnish an easy test of the condition of the animal in respect of fatness. The literal application may attach to the word as put into Falstaff's mouth in the following extract.

'Think of that,—a man of my *kidney*,—think of that; that am as subject to heat as butter; a man of continual dissolution and thaw; it was a miracle to 'scape suffocation.' *Shak.*

Knout (nout), *n.* [Russ. knute, E. knot.] An instrument of punishment used in Russia, described in the following extract. The criminal, standing erect and bound to two stakes, receives the specified number of lashes on the bare back. Almost every lash is followed by a stream of blood.

The knout consists of a handle about two feet long, to which is fastened a flat leather thong about twice the length of the handle, terminating with a large copper or brass ring; to this ring is affixed a strip of hide about two inches broad at the ring, and terminating, at the end of two feet, in a point. This is soaked in milk, and dried in the sun to make it harder; and, should it fall, in striking the culprit, on the edge, it would cut like a penknife. At every sixth stroke the tail is changed. *New Month Mag.*

Knout (nout), *v. t.* To punish with the knout or whip.

The freaks of Paul, who banished and knouted persons of every station, were safely displayed in Petersburg and Moscow. *Brougham*.

Know (nô), *v. t.* pret. *knew*; pp. *known*; ppr. *knowing*. [A Sax. *cnraean*, pret. *cnæw*, ppr. *cnæwes*; comp. Icel. *kná*, to know how to do a thing, and hence, to be able. This, like a number of other words in the Indo-European languages, is derived from an old root meaning originally to produce, and giving origin to two secondary forms, *gan* and *gná*, the former meaning more especially to produce, the latter to know. 'To know points back to Skr. *gná*, but this *gná*, the L. *gnô* in *gnôvô* (*novi*), or *gnô* in Gr. *egnô*, again points back to *janá*, contracted *gná*. Many roots are formed by the same process and they generally express a derivative idea. Thus *jan*, which means to create, to produce, and which we find in Skr. *janas*, Gr. *genos*, genus, kin, is raised to *gná* in order to express the idea of being able to produce. If I am able to produce music, I know music; if I am able to produce ploughing, I know how to plough, I can plough; and hence the frequent running together of the two conceptions I can and I know.' *Max Müller*. Comp. E. can, to be able, and ken, to know. Icel. *kenna*, used in both senses; G. *können*, to be able (*ich kann*, I can), *kennen*, to know. Among the many English words connected with *know*, we may mention *can*, *ken*, *kin*, *kind*, *king*, *name*, *noble*, *narrate* (these words have lost g before the n, seen in *ignoble*, *ignorant*), *uncouth*, *queen*, *quean*, &c.] 1. To perceive with certainty; to understand clearly; to have a clear and certain perception of the truth of; as, we know what we see with our eyes or perceive by other senses; we know that fire and water are different substances; we do not know the truth of reports, nor can we always know what to believe.—2. To be convinced or satisfied regarding the truth or reality of; to have no doubt in the mind regarding; to be assured of; to be informed of; as, to know things from information.—3. To distinguish; as, to know one man from another; we know a fixed star from a planet by its twinkling. 'A new name whereby to know it.' *Locke*.—4. To recognize by recollection, remembrance, representation, or description; as, we do not always know a person after a long absence; we sometimes know a

man by having seen his portrait, or having heard him described.

At nearer view he thought he knew the dead. And called the wretched man to mind. *Flatman*.

5. To be no stranger to; to be familiar with; to have experience of; as, this man is well known to us.

Not to know me argues yourselves unknown. *Milton*. He hath made him to be sin for us, who knew no sin. 2 Cor. v. 21.

6. † To have sexual commerce with. *Gen. iv. 1*.—To know how to, to understand the way to; to be skilled in the manner to; to be sufficiently wise, enlightened, or informed to; as, I know how to separate the chemical elements of water. Sometimes how is omitted.

If we fear to die, we know not to be patient.

Fer. Taylor.

Earth-wolf (erth-'wulf), *n.* The *aardwolf*. See *PROTELES*.

Easter-egg (ēs-'tēr-eg), *n.* Same as *Pasch-egg*.

Echlesiologic (ek-'klē-'zī-'ō-'lō-'jik-al), *a.* Pertaining to echlesiology.

Echelon-lens (ē-'she-'lon-'lenz), *n.* [Fr. *échelon*, the round of a ladder, and *E. lens*.] A compound lens, used for lighthouses, having a series of concentric annular lenses arranged round a central lens so that all have a common focus.

Echinoid (ē-'kin-'oid), *a.* Having the form or character of an echinus or sea-urchin; pertaining to the Echinoidea.

Echoic (ek-'ō-'ik), *a.* Pertaining to echoism.

Echoism (ek-'ō-'izm), *n.* In *philol.* the formation of words by echoing or imitating natural sounds; onomatopœia. *Dr. J. A. H. Murray*.

Eern (ā-'krū), *a.* [Fr.] Of the colour of unbleached linen; of a light yellowish brown.

Ectasis, [add.] Extension or expansion; specifically, in *med.* a dilated condition of a blood-vessel.

Ecthesis (ek-'the-'sis), *n.* [Gr.] An exposition or setting forth, as of doctrines.

Ectoplasm (ek-'tō-'plazm), *n.* [Gr. *ektos*, without, and *plasma*, form.] In *biol.* the exterior protoplasm of a cell; ectosarc.

Ectropical (ek-'trōp'-'i-'kal), *a.* Belonging to parts outside the tropics; being outside the tropics.

Écu (ā-'kū), *a.* [Fr., a coin, a crown piece, a shield; O. Fr. *escu*, *escut*, from *L. scutum*, a shield.] A name given to various French coins having different values at different times, but notably to an old piece of money worth three francs, or about half-a-crown sterling.

Eddaic, **Eddic** (ed-'ā'ik, ed'-'ik), *a.* Of or relating to the Eddas; having the character or style of the Eddas. *E. W. Gosse*.

Edibulatory (ed-'i-bil'-'tō-'ri), *a.* Of or pertaining to edibles or eating. *Lord Lytton*. [Rare.]

Educative (ed'-'ū-kāt-iv), *a.* Tending or serving to educate; effective in educating.

English writers, though recognized in America with eager appreciation, cannot hope to be so directly *educative*, so precisely accommodated to the needs of the new community, as authors bred and born among the people whom they address. *Atkinson*.

Eerily (ē-'ri-'li), *adv.* In an eerie, strange, or unearthly manner. 'Wildly, eerily, urgently.' *Charlotte Brontë*.

Efferent (ē-'fer-ent), *n.* [See the adj.] 1. In *physiol.* a vessel or nerve which discharges or conveys outward. — 2. A river flowing from and bearing away the waters of a lake.

Effigiation, *n.* [add.] That which is formed in resemblance; an image or effigy. [Rare.]

No such *effigiation* was therein discovered, which some fifteen weeks after became visible. *Fuller*.

Efflower (ēf-'flō-ūr), *v. t.* [Fr. *effleurir*, to graze, to rub lightly.] In *leather manufacture*, see the following extract.

The skins (chamois leather) are first washed, lined, fleeced, and branned. . . . They are next *efflowered*, that is, deprived of their epidermis by a concave knife, blunt in its middle part, upon the convex horse-bean. *Ure*.

Efreet (ē-'fret), *n.* Same as *Afrīt*. **Eft** (ēft), *a.* Convenient; handy. 'The *eftest* way.' *Shak.* [This adjective is not otherwise known.]

Egence (ē-'jens), *n.* [L. *egens*, ppr. of *egere*, to suffer want.] The state or condition of suffering from the need of something; a desire for something wanted. *Grote*.

Egesta (ē-'jes-'ta), *n. pl.* [See *EGEST*.] Matter excreted or discharged; excrement; feces.

Egg-apple (eg-'ap-'l), *n.* See *MAD-APPLE*.

Egilops, *n.* [add.] A genus of grasses allied to *Triticum*, or wheat-grass. It occurs wild in the south of Europe and parts of Asia. It is believed by many botanists to be in reality the plant from which has originated our cultivated wheats. Written also *Egilops*.

Ego-altruistic (ē'gō-al-trū-iz'is-tik), *a.* Of or relating to one's self and to others. See *extract*.

From the egoistic sentiments we pass now to the *ego-altruistic* sentiments. By this name I mean sentiments which, while implying self-gratification, also imply gratification in others; the representation of this gratification in others being a source of pleasure not intrinsically, but because of ulterior benefits to self which experience associates with it. *H. Spencer.*

Eguisé (ē-gwē'zā), *a.* In *her.* Same as *Aiguisé*.

Eidoloclast (i-dō'lo-klast), *n.* An image-breaker; an idoloclast. *De Quincy.*

Ejecta, Ejectamenta (ē-jek'ta, ē-jek'ta-men'ta), *n. pl.* [L. *ejectum, ejectamentum*, what is cast out—*e*, out, and *jacio*, to throw.] Things cast out or ejected; matter discharged; refuse.

Elædochion (el-ē'od'o-kon), *n.* [Gr. *elaion*, oil, *dechmai*, to contain or receive.] The oil-gland of a bird situated at the root of the tail on the pope's-nose.

Elan (ā-lān), *n.* [Fr., from *élancer*, to rush or spring forward, from *L. lancea*, a spear.] Ardour inspired by enthusiasm, passion, or the like; dash.

Elchi (el'chē), See **EITCHI** in Supp.

Elder, *n.* [add.]—*Elder hand*, in card-playing, the player who leads.

Electric, *a.* [add.]—*Electric lamp*, the contrivance in which the electric light is produced. See *Electric light* below.—*Electric light*, a brilliant light, the result of heat produced by the force of electricity either evoked by the chemical reaction of a metal and an acid, or generated by a magneto-electric or other machine. The *arc light* is produced when two carbon pencils are attached to the electrodes of a powerful magneto-electric machine or galvanic battery, and their points are brought together long enough to establish the electric current. If they are then separated to a small distance, varying according to the strength of the current, the current will continue to flow, leaping across from carbon to carbon, emitting a light of great intensity at the space between the points. The name *Voltaic* or *electric arc* is given to that portion where the current leaps across from point to point, the term *arc* being suggested by the curved form which the current here takes. The *incandescent light* is obtained by the incandescence, by means of electricity, of various substances, including carbon, in a vacuum. Many forms of apparatus are in use for producing the electric light, distinguished either by the form of the generating machine, the distribution of the current, or the kind of burner. In the *Jablochkoff light*, the burner consists of a pair of carbon spindles placed parallel to one another, with an insulating earthy substance between them. Its combustion may be roughly compared to that of an ordinary candle, where the earthy substance takes the place of the wick. Other forms of the 'candle' burner are in use, such as the *Lon-tin*, the *Jamin*, &c. The *Maxim*, *Edison*, and *Swan* lights proceed from an incandescent filament of carbon in a more or less perfect vacuum.—*Electric machine*, [add.] Besides machines in which electricity is excited by friction, electric machines are now common in which an electric current is generated by the revolution near the poles of a magnet or magnets of one or more soft-iron cores surrounded by coils of wire, those machines being known distinctively as *magneto-electric machines*. A *dynamo-electric machine* is a machine of this kind, in which the induced currents are made to circulate round the soft-iron magnet which produced them, thus increasing its magnetization. This again produces a proportionate increase in the induced currents, and thus by a successive alternation of mutual actions very intense magnetization and very powerful currents are speedily obtained. There are many forms of these machines, such as *Gramme's*, *Siemens's*, *Wilde's*, *Brush's*, &c., used extensively in electric lighting, and as a motor for machinery, elec-

tric railways, &c.—*Electric organ*, an organ in which electricity is employed in connection with the mechanism, one advantage of this being that the instrument and the player may be a considerable distance apart, each where it is most convenient.—*Electric pendulum*, a form of electroscope consisting of a pith-ball suspended by a non-conducting thread.—*Electric railway*, a railway on which electricity is the motor. Only short lines have as yet been constructed. On one of these the wheels of the carriages are set in motion by a dynamo-electric machine placed between them and below the floor. This machine is actuated by an electric current produced by another dynamo-electric machine, which is stationary and driven by a steam-engine. The current is conveyed by wires which may be laid underground or supported on poles. By another system a storage battery carried by the car itself supplies the driving power.

Electrocautery (ē-lek'trō-kā'tē-ri), *n.* In *surg.* cautery by means of a platinum wire heated by the passage of an electric current.

Electrocute (ē-lek'trō-kūt), *v. t. pret. & pp. electrocuted; ppr. electrocuting.* [From *electro-*, and the *-cute* of *execute*.] To execute or put to death by means of electricity, a method of punishing criminals recently introduced in the U. States. The form *Electricite* is also used.

Electrocution (ē-lek'trō-kū'shon), *n.* The act of electrocuting; execution by means of electricity. *Electrocution* is also used.

Electrodynamometer (ē-lek'trō-di-namōm'et-ēr), *n.* An instrument for measuring the strength of electro-dynamic action. It consists essentially of a fixed coil and a movable coil, usually suspended in a bifilar manner, and furnished with a mirror, so that its motions about a vertical axis can be read off by means of a scale and telescope.

Electrokinetic (ē-lek'trō-kī-net'ik), *a.* Of or pertaining to electrokinetics or electricity in motion.

Electrokinetics (ē-lek'trō-kī-net'iks), *n.* That branch of electricity which treats of electric currents in motion.

Electrometry (ē-lek'trō-met-ri), *n.* That branch of the electric science which treats of the measurement of electricity.

Electrotonic (ē-lek'trō-ton'ik), *a.* Of, pertaining to, or produced by electrotonicity.

Electrotonicity (ē-lek'trō-tō-nis'i-ti), *n.* A peculiar alteration of the normal electric current of a nerve, produced by the passage of a galvanic current through it. Called also *Electrotonus*.

Electrotonize (ē-lek'trō-ton-iz), *v. t.* To alter the normal electric current of, as a nerve. See **ELECTROTONICITY**.

Elegize (el'ē-jiz), *v. t. and i. pret. & pp. elegized; ppr. elegizing.* To write or compose elegies; to celebrate or lament after the style of an elegy; to bewail.

I . . . perhaps should have *elegized* on for a page or two farther, when Harry, who has no idea of the dignity of grief, blundered in. *H. Walpole.*

Elementalism (el-ē-ment'al-izm), *n.* The theory which identifies the divinities of the ancients with the elemental powers; worship of the elemental powers of nature. *Gladstone.*

Elementator (el'ē-men-tā-tēr), *n.* The writer of an elementary treatise or manual. *Sat. Rev.* [Rare.]

Elementoid (el-ē-ment'oid), *a.* [L. *elementum*, an element, and Gr. *eidōs*, form.] Like an element; having the nature of a simple elementary substance.

Elephant-shrew (el'ē-fant-shrō), *n.* A name for certain small insectivorous animals of Africa, somewhat resembling shrew-mice, having a decided proboscis and long hindlimbs which enable them to jump well. Some of them belong to the genus *Macroscelides* (which see).

Eleutheromania (ē-lū'thē-rō-mā'ni-a), *n.* [Gr. *eleutheros*, free, and *mania*, madness.] A mania for freedom; excessive zeal for freedom. 'Insubordination, *eleutheromania*, confused, unlimited opposition.' *Carlyle.*

Eleutheromaniac (ē-lū'thē-rō-mā'ni-ak), *n.* [See preceding art.] One having an excessive zeal for freedom; a fanatic on the subject of freedom.

Eleutheromaniac (ē-lū'thē-rō-mā'ni-ak), *a.* Having a mania for freedom. *Carlyle.*

Elchi, Elchee (el'chē), *n.* An ambassador or envoy; a Persian and Turkish name.

Things which they had told to Colonel Rose they did not yet dare to tell to the great *Elchi* [Lord Stratford de Redcliffe]. *Kingslake.*

Eluctate (ē-luk'tāt), *v. i.* [L. *eluctor, eluctatus*—*e*, out of, and *luctor*, to wrestle.] To struggle out; to burst forth; to escape.

They did *eluctate* out of their injuries with credit to themselves. *Ep. Hackett.*

Embryologically (em'bri-o-lōj'ik-al-i), *adv.* According to embryology. *Kingsley.*

Embryologist (em-bri-o-lō-jist), *n.* One versed in the doctrines of embryology.

Emender (ē-meid'ēr), *n.* One who emends; one who removes faults, blemishes, or the like; an emendator. *E. B. Browning.*

Emergency, *n.* [add.] Something not calculated upon; an unexpected gain; a casual profit. 'The rents, profits, and *emergencies*.' *Heylin.*

Emmanuel (em-man'u-el), *n.* Same as *Immanuel*.

Emmensite (em'enz-it), *n.* [From *Emmens*, the inventor of it.] An explosive recently introduced for use in torpedoes, &c.

Emmetropia (em-me-trō-pi-a), *n.* [Gr. *en*, in, *metron*, measure, *ops*, the eye.] The condition of the eye when it is normal as regards focal length; normal power of vision, as opposed for instance to hypermetropia.

Emmetropic (em-me-trōp'ik), *a.* Characterized by or pertaining to emmetropia.

Emmetropy (em-met'ro-pi), *n.* Emmetropia (which see).

Emplumed (em-plūmd'), *a.* Adorned with, or as with, plumes or feathers. *E. B. Browning.*

Empoldered (em-pōld'erd), *a.* Reclaimed and brought into the condition of a polder; brought under cultivation. See **POLDER**.

Enantiomorph (en-an'ti-ō-morf), *a.* Enantiomorphous.

Two figures or two portions of matter are said to be *enantiomorph* to each other when these forms are not superposable, i. e. the one will not fit into a mould which fits the other, but the one is identical in form with the mirror image of the other. *Prof. A. Crum Brown.*

Enantiomorphism (en-an'ti-ō-morf'izm), *n.* The state or condition of being enantiomorphous. *Prof. A. Crum Brown.*

Enantiomorphous, Enantiomorphie (en-an'ti-ō-morf'us, en-an'ti-ō-morf'ik), *a.* [Gr. *enantios*, opposite, *morphe*, form.] Having the same shape and size, but the one right-handed or left-handed in relation to the other, so that they cannot be superposed or inserted in the same mould. See quotation under *Enantiomorph*.

Encash (en-kash'), *v. t.* [Prefix *en*, and *cash*.] To convert into cash; to pay or get payment of in money; to cash.

Enchaser (en-chās'ēr), *n.* One who enchases; a chaser.

Enclave (ān-kliv'), *v. t.* To cause to be an enclave; to inclose or surround, as a region or state by the territories of another power.

Enclavement (ān-klav'ment), *n.* The state or condition of being an enclave, or surrounded by an alien territory.

Encolure (en-kōl'ūr), *n.* [Fr., from *en*, in, and *col*, the neck.] The neck and shoulders, as of a horse.

Carved like the heart of the coal-black tree, Crisped like a war-steed's *encolure*. *Browning.*

Endemic, *a.* [add.] Peculiar to a locality or region; as, *endemic* species of plants. *A. R. Wallace.*

Endome (en-dōm'), *v. t.* To cover with a dome, or as with a dome.

The blue Tuscan sky *endomes* Our English words of prayer. *E. B. Browning.*

Endurant (en-dūr'ant), *a.* Able to endure fatigue, pain, or the like.

The *Ibex* is a remarkably *endurant* animal, and is capable of abstaining from food or water for a considerable time. *W. G. Wood.*

Enface (en-fās'), *v. t.* [Prefix *en*, and *face*.] To write, stamp, or print upon the face of, as on a bill, dividend warrant, &c.

Enfacement (en-fās'ment), *n.* The act of enfacing; what is written or printed on the face of a bill.

En passant, [add.] In *chess*, when on moving a pawn two squares, an adversary's pawn is at the time in such a position as to take the pawn moved if it were moved but one square, the moving pawn may be taken, as it is called, *en passant*.

Enpatron (en-pā'tron), *v. t.* To have under one's patronage or guardianship; to be the patron saint of. *Shak.*

Ensete (en-sē'te), *n.* An Abyssinian name for *Musa Ensete*, a noble plant of the banana genus. It produces leaves about 20 feet long and 3 or 4 broad, the largest entire leaf as yet known. The flower-stalk,

The Swan Incandescent Lamp.

which is as thick as a man's arm, is used for food, but the fruit is worthless.

Ensilage (en-sil-aj), *n.* [Fr. *ensilage*, from Sp. *ensilar*, to store grain in an underground receptacle, from *en*, in, and *silo*, from L. *sirus*, the pit in which such grain is kept.] 1. In *agri.*, a mode of storing green fodder, as grass, clover, tares, and, &c., by burying it in pits or silos dug in the ground, or collecting it in inclosures constructed of masonry above ground, the substance being pressed down by heavy weights and undergoing a slight fermentation. This has been practised in some countries from very early times, and has been recommended and to some extent adopted by modern agriculturists. The silos have a movable wooden covering upon which the weights are placed. —2. The fodder treated on this system.

Ensilé (en-sil'), *v.t.* pret. & pp. *ensiled*; ppr. *ensiling*. To convert into ensilage.

Enswathed (en-swath'ed), *p.* and *a.* Enwrapped; enveloped; inswathed. *Shak.*

Entempest (en-tem'pest), *v.t.* To disturb, as by a tempest; to visit with storm.

For aye entempesting anew
The unfathomable hell within. *Coleridge.*

Entertain, *v.t.* [add.] To meet as an enemy; to encounter. [Rare.] *Shak.*

Enthetic (en-thet'ik), *a.* [Gr. *enthetikos*—*en*, in, and *thetikein*, to place.] Introduced from without; implanted; said, especially of diseases, as those of the phibiotic class.

Entire, *n.* [add.] 1. The whole or total; the entire thing.—2. Entirety; complete condition.

I am narrating as it were the Warrington manuscript, which is too long to print in *entire*. *Thackeray.*

3. An entire horse.

Entire, *a.* [add.]—*Entire horse*, an uncastrated horse; a stallion.

A *Caballo Padre*, or what some of our own writers, with a decorum not less becoming, appellation an *entire horse*. *Southey.*

Entomologize (en-tom-o-l'og-iz), *v.t.* To study entomology; to gather entomological specimens.

It is too rough for trawling to-day, and too wet for entomologizing. *Kingsley.*

Entourage (ân-tô-râzh), *n.* [Fr., from *en*, and *tour*, circuit, turn, tour.] Surroundings of a place or a person; people who are in attendance on a person.

Entrain (en-trân'), *v.t.* [In first sense from Fr. *entraîner*—*en*, and *traîner*, to drag; in second from *en* and *train*.]—1. † To draw or bring on. "With its destiny entrained their fate." *Vanbrugh*.—2. To put on board a railway train; as, the regiment was *entrained* at Edinburgh and proceeded to Portsmouth: opposite to *detrain*.

Entrain (en-trân'), *v.t.* To take places in a railway train; as, when the troops *entrained* they were loudly cheered.

Entrapment (en-trap'ment), *n.* The act of entrapping. "The entrapment of various minute crustaceans." *Darwin.*

Entrecht (ân-trê-shâ), *n.* [Fr.] A spring from the floor in dancing, the feet at the same time being struck together. *R. H. Barham.*

Enwrite (en-rit'), *v.t.* To inscribe; to write upon; to imprint.

What wild heart histories seemed to lie *enwritten*
Upon those crystalline, celestial spheres! *Poe.*

Enzyme, **Enzym** (ên-zim, en-zim), *n.* [Gr. *en*, in, *zyme*, leaven.] 1. Any of the ordinary ferments, as pepsin, diastase, &c.—2. Leavened bread as used in the Eastern churches.

Éoan (ê-ô'an), *a.* [L. *eoas*, pertaining to the dawn or the east, from Gr. *êos*, the dawn.] Of or pertaining to the dawn; eastern.

The Mithra of the Middle World,
That sheds *Éoan* radiance on the West.
Sir H. Taylor.

Eohippus (ê-ô-hip-pus), *n.* [Gr. *êos*, the dawn, *hippos*, a horse.] A fossil quadruped of the Eocene period, belonging to the horse family, and representing an ancestral form of our horse; about the size of a fox, and having the fore-feet with four toes, and hind-feet with three.

Eolith (ê-ô-lith), *n.* An eolithic stone implement. *A. H. Keane.*

Eolithic (ê-ô-lith'ik), *a.* [Gr. *êos*, the dawn, and *lithos*, a stone.] In archaeol. of or pertaining to the early part of the paleolithic period of prehistoric time.

Eophyte (ê-ô-fib), *n.* [Gr. *êos*, dawn, and *phyton*, a plant.] A fossil plant found in eozoic rocks.

Eophytic (ê-ô-fit'ik), *a.* Of or pertaining to eophytes; relating to the oldest fossiliferous rocks; eozoic.

Eos (ê-ô's or ê-ô's), *n.* In *Greek myth.* the goddess of the morning, who brings up the light of day from the east; equivalent to the Roman *Aurora*.

Eosin (ê-ô-sin), *n.* [Gr. *êos*, the dawn.] A dye obtained from coal-tar products giving a rose-red colour.

Eozoic (ê-ô-zô'ik), *a.* [Gr. *êos*, dawn, and *zôê*, life.] Of or pertaining to the oldest fossiliferous rocks, such as the Laurentian and Huronian of Canada, from their being supposed to contain the first or earliest traces of life in the stratified systems. *Page.*

Ephêbic (e-fê'bik), *a.* [Gr. *ephêbos*, a youth—*epi*, upon, *hêbê*, youth.] Pertaining to youth or early manhood.

Ephemerality (e-fem-e-ral'i-ti), *n.* 1. The state of being ephemeral.—2. That which is ephemeral; a transient trifle. "Chattered ephemerality." *C. Reade.*

Epichorial (e-pi-kô'ri-al), *a.* [Gr. *epichôrios*—*epi*, upon, and *chôra*, country.] Of or pertaining to a particular country; local.

Local or *epichorial* superstitions from every district of Europe come forward by thousands. *De Quincey.*

Epicotyl (e-pi-kot-il), *n.* [Gr. *epi*, upon, and contr. of *cotyledon*.] 1. *bot.* the stem above the cotyledons; the plumule. *Darwin.*

Epigæa (e-pi-jé'a), *n.* [Gr. *epi*, upon, and *gê*, the earth.] A genus of shrubs of the heathwort order, characterized by having three leaflets of the outside of the five-parted calyx; and by the corolla being salver-shaped, five-cleft, with its tube hairy on the inside. *E. repens*, the trailing arbutus, is the May-flower of North America.

Epigenesis, *n.* [add.] In *geol.* same as *Metamorphism*.

Epigenetic (e-pi-jen-et'ik), *a.* Of, pertaining to, or produced by epigenesis.

Epigrammatism (e-pi-gram'mat-izm), *n.* The quality of being epigrammatic; epigrammatical character. *Poe.*

Epinastic (e-pi-nas'tik), *a.* Pertaining to or connected with epinasty.

Epinasty (e-pi-nas-ti), *n.* [Gr. *epi*, upon, above, and *nastos*, close pressed, solid.] In *bot.* a term implying increased growth on the upper surface of an organ or part of a plant, thus causing it to bend downwards.

Epiotic (e-pi-ô'tik), *a.* [Gr. *epi*, upon, and *ôtos*, ôtos, the ear.] In *anat.* situated above the ear.

Epipubic (e-pi-pû'bik), *a.* [Prefix *epi*, and *pubis*.] In *zool.* said of certain bones that help to support the pouch of marsupials. *Ency. Brit.*

Epirot, **Epirote** (e-pi-rôt), *n.* A native or inhabitant of Epirus or Lower Albania.

Episcopize (ê-pis'kô-piz), *v.t.* 1. To consecrate to the episcopal office; to make a bishop of.

There seems reason to believe that Wesley was willing to have been *episcopized* upon this occasion. *Southey.*

—2. To bring under the rule of bishops; to subject to episcopal government.

Episcopize (ê-pis'kô-piz), *v.t.* To exercise the office of a bishop. *W. Broome.*

Epistemology (e-pis'tê-mol'o-jî), *n.* [Gr. *epistêmê*, knowledge, and *logos*, discourse.] That department of metaphysics which investigates and explains the doctrine or theory of knowing; distinguished from *ontology*, which investigates real existence or the theory of being. *Ferrier.*

Episylogism (e-pi-sil'o-jizm), *n.* In *logic*, same as *Epichthema*.

Epitheloid (e-pi-thê-li-oid), *a.* Resembling epithelium; of the nature of epithelium.

Epithelioma (e-pi-thê-li-ô'ma), *n.* [From *epithelium*.] Cancer of the epithelium or mucous membrane; epithelial cancer.

Epithesis (e-pi-thê-sis), *n.* [Gr. *epi*, upon, and *thesis*, a setting.] In *gram.* same as *Paragoge*.

Epitonic (e-pi-ton'ik), *a.* [Gr. *epitônos*—*epi*, and *tonô*, to stretch.] Overstrained. *Geo. Meredith.*

Eponymist (e-pon'im-ist). Same as *Eponym*, *s.* *Gladstone.*

Epoet (ê-pô-et), *n.* [Gr. *epoietês*, one initiated into the sacred rites and mysteries of Eleusis.] One initiated into the doctrines or mysteries of any secret system. *Carlyle.*

Epsomite (ep'sum-it), *n.* Same as *Hair-salt* (which see).

Equanimously (ê-kwan'i-mus-li), *adv.* [See *EQUANIMITY*.] With equanimity; with an easy mind.

Pendens, in reality, suffered it very *equanimously*. *Thackeray.*

Equirota (ê-kwî-rô'tal), *a.* [L. *aequus*, equal, *rota*, a wheel.] Having wheels of equal size; having the fore and hind wheels of the same size.

Equison (ê-kwi-son), *n.* [L. *equiso*, a groom, from *equus*, a horse.] A horse jockey; one who manages race-horses. [Lander puts the word in Porson's mouth: it is elsewhere unknown as an English word.]

Who announces to the world the works and days of Newmarket, the competitors at its games, their horses, their *equisons*, their colours. *Lander.*

Equivalent (ê-kwiv'a-lent), *v.t.* To produce or constitute an equivalent to; to answer in full proportion; to equal. *J. N. Lockyer.*

Equivalence (e-kwi-val'û), *v.t.* To value at the same rate; to put on a par. "To *equi-value* the noble and the rabble of authorities." *W. Taylor.*

Erpeton (êr'pet-on), *n.* Same as *Herpeton*.

Errabund (er'ra-bund), *a.* [L. *errabundus*, from *erro*, to wander.] Erratic; wandering; rambling. "Your *errabund* guesses." *Southey.*

Erruptional (ê-rup'shon-al), *a.* Of or pertaining to eruptions; eruptive; as, *erruptional* phenomena. *R. A. Proctor.*

Eschatological (es'kat-o-lôj'ik-al), *a.* Pertaining to eschatology, or to death, and what comes after death.

Esclandre (es-klân-dr), *n.* [Fr.] A disturbance; a scene; a row.

Scoutish, to avoid *esclandre* and misery, thought it well to waive the proviso. *Kingsley.*

Escribe (ê-skrib'), *v.t.* pret. & pp. *scribed*; ppr. *scribing*. [L. *e*, out, and *scribo*, to write.] In *geom.* to draw (a circle) so that it touches one side of a triangle externally and the other two sides produced.

Essayical, **Essaical** (es-sâ'ik-al), *a.* Pertaining to or of the nature of an essay.

We find Mark Pattison's sermons to be of the latter kind. They are formal, academical, *essayical*, and dull. *Scottman Newspaper.*

Esurience, **Esuriency** (ê-sû'ri-ens, ê-sû'ri-en-si), *n.* The state or quality of being esurient; appetite; hunger; greediness.

The man seems to be disappearing; there is a return to the sinister type. The eye speaks of nothing but dull *esurience*. *W. S. Lidd.*

- Don Belianis** (bēl-i-ā'nīs) of Greece. The hero of an old romance of chivalry.
- Don Ju'an**. The hero of a Spanish legend which has been much employed for the dramatic and operatic stage, and furnished the name to Byron's poem. The don is the type of a finished and reckless libertine, who makes conquests over the fair sex everywhere and kills the father of one of his victims, but is at last dragged down alive to the infernal regions. Byron's unfinished poem borrows little or nothing but the name from the old legend.
- Don Quixote** (Spanish pron. kē-hō'tā). The hero of the great Spanish romance of Cervantes, a Castilian country gentleman so crazed by reading books of chivalry that he sallies forth as a knight-errant to succour the oppressed and redress wrongs. As his squire he takes along with him Sancho Panza, an ignorant, credulous, and vulgar peasant, pot-bellied, gluttonous, and selfish, yet faithful to his master, shrewd and amusing. The knight, mounted on his steed Rosinante, equally gaunt with the rider, and the squire on his ass Dapple have various amusing experiences, since the don looks upon flocks of sheep as armies, windmills as giants, and galley-slaves as oppressed gentlemen.

Faustus was a magician and astrologer who sold himself to the devil on condition of obtaining for a period every kind of worldly enjoyment, at the end of which he realizes with horror and despair the penalty he has now to pay. The Faust of Goethe is a creation of a higher character. He is a scholar who has mastered all the science of his day, and has meditated on the problems of life, finding that all is but vanity and vexation of spirit. The tragic element here is furnished by the fate of the hapless Margaret, whom he seduces, and who is condemned for murdering her baby. The Mephistopheles of Goethe—the demonic being who fulfils all Faust's wishes—is also a far more interesting figure than the vulgar fiend of the older stories. Gounod's opera *Faust* is well known.

- Wemmick, Mr. Clerk to the lawyer Mr. Jaggers in Dickens's *Great Expectations*. He lived with his old father in a little house which he had converted into a sort of miniature fortress.
- Wenham. See WAGO.
- Werther (vâr'têr). A young German student, the sickly sentimental hero of Goethe's *Sorrows of Werther*, who puts an end to himself because he vainly covets his neighbour's wife. Thackeray compresses the story into a few humorous verses more pithy than complimentary to the hero.
- Western, Squire. A jolly, ignorant, coarse, hot-tempered, and intensely prejudiced English squire in Fielding's *Tom Jones*. His charming daughter Sophia is in love with and marries Tom Jones.
- Westlock, John. In Dickens's *Martin Chuzzlewit*, a fine young man who studies architecture under Pecksniff, and marries Ruth Pinch.
- Westward Ho! The name of a novel by Charles Kingsley. See LEIGH (AMYAS).
- Whang. A character in Goldsmith's *Citizen of the World*, an avaricious miller who undermined his mill in digging for a treasure.
- Whiskeran'dos, Don. The lover of Tilburina in Puff's ridiculous tragedy that is introduced into Sheridan's comedy *The Critic*.
- White Cat, The. Name of a fairy tale by Madame d'Aulnoy, telling of a beautiful princess turned into a cat by fairy power.
- Whittington, Dick. The hero of a story known to every one, and which seems to have been at least founded on fact.
- Wickfield, Agnes. A beautiful, amiable, and sensible young lady in Dickens's *David Copperfield*, daughter of Mr. Wickfield, a lawyer; becomes David Copperfield's second wife. Uriah Heep was clerk to her father, and nearly brought ruin upon him.
- Wild, Jonathan. A notorious English robber who is the hero of Fielding's satiric novel *The Adventures of Jonathan Wild the Great*.
- Wildair, Sir Harry. The hero and title of a comedy by Farquhar, a rakish young fellow not devoid of good feeling.
- Wildfire, Madge. A young woman in Scott's novel *The Heart of Midlothian*, whose brain has been turned by seduction and the murder of her infant, and who still retains the giddiness and love of finery natural to her character.
- Wild Huntsman. A spectral huntsman of German legend, who goes careering along at night with a noisy train of men and dogs; the subject of a ballad by Bürger, translated by Sir Walter Scott.
- Wilding, Jack. The hero of Foote's comedy *The Liar*, a young man who tells the most barefaced falsehoods.
- Wildrake (wîld'râk), Roger. A careless and dissipated young cavalier who renders some services to Charles II. in Scott's *Woodstock*.
- Wilfer, Bella. The heroine of *Our Mutual Friend*, by Dickens, a pretty girl somewhat wilful and giddy, married by John Harmon under an assumed name. Her mother is oppressively dignified and majestic, her father, a rather hard-up clerk, not at all so.
- Wilford, Lord. A character in Sheridan Knowles's *Beggar of Bethnal Green*, in love with Bess the beggar's daughter.
- Wilhelm Meister. See MEISTER.
- Wilkins, Peter. The hero of a tale by a Robert Paltock (written about 1750), a sort of Crusoe who meets with a winged race of people in a land of twilight. See GAWREYS.
- Willet, John. The ignorant pig-headed landlord of the Maypole in Dickens's *Barnaby Rudge*, who tyrannizes over his son Joe in such a way as to make him run away and enlist. Joe afterwards marries Dolly Varden and becomes landlord himself.
- Williams, Caleb. The hero and title of a novel by Godwin. See FALKLAND.
- Wilmot. Name of a family in Lillo's tragedy *Fatal Curiosity*. Young Wilmot goes to India and makes a fortune, and, having returned, visits his father and mother in disguise and leaves with them a casket. This they open, and finding that it contains jewels they ignorantly murder their own son to obtain them.
- Wilton, Ralph de. A gallant young man in Scott's *Marion*, loving and loved by the Lady Clare, who is also wooed by Marmon.
- Wimble, Will. An amusing character in the *Spectator*, a member of the club to which Sir Roger de Coverley and others belong.
- Winkle, Mr. Nathaniel. One of the companions of the immortal Pickwick, represented as the would-be sportsman of the party, but knowing as little of shooting as he does of skating. He marries Arabella Allen.
- Winkle, Rip Van. An American Dutchman, hero of a story by Washington Irving, a good-humoured, indolent sort of fellow, who encounters a strange company playing at nine-pins in the Kaatskill Mountains, and having tasted their liquor falls asleep and does not awake for twenty years.
- Wittitlerley (wî-tî't-êr-lî), Mr. and Mrs. In Dickens's *Nicholas Nickleby* a couple who have great pretensions to intimacy with the aristocracy.
- Witwoud (wî't-wôd), Sir Wilful. In Congreve's *Way of the World* 'a superannuated old bachelor' who is inclined to marry Milamant but gets little encouragement.
- Woden. Same as ODIN.
- Woodcock, Adam. A falconer at Avenel Castle in Scott's *Abbot*.
- Wooden Horse. A huge figure of a horse made of wood, and containing armed Greeks which the Trojans were induced by the Greeks to admit into Troy, thus leading to the capture of the city.
- Wrayburn (râ'bêrn), Eugene. An indolent, aimless barrister in *Our Mutual Friend*, by Dickens, in love with Lizzie Hexam, and nearly murdered by Bradley Headstone in consequence.
- Wren, Jenny. A girl with a rickety body and beautiful head of hair, who works as a 'doll's dressmaker' in *Our Mutual Friend*.
- Wroughhead, Sir Francis, and Lady. A country couple who come to London, and nearly ruin themselves by their follies, in Vanbrugh's *Provoked Husband*.
- Wyoming (wî'o-mîng; properly wî-ô'mîng), Gertrude of. The heroine and title of a poem by Campbell, telling of American Indians and a massacre of early settlers.
- Xanadu (zan'a-dô). A city of Asia named in Coleridge's poem of *Kubla Khan*.
- Xanthus (zan'thus). The horse of Achilles, that could speak with a human voice.
- Xantippe, Xanthippe (zan-tîp'pê, zan-thîp'ô). The wife of Socrates, proverbial as an arrant shrew.
- Xury (zû'ri). A Morisco boy in Defoe's *Robinson Crusoe*, companion of Crusoe when he escaped from the Moors of Salée.
- Yahoo. See in Dict.
- Yama (yâ'ma). An Indian deity, lord of hell, fierce and terrible.
- Yarico (yar'i-kô). See INKLE.
- Yellow Dwarf. A malignant imp in the fairy tale so called, by the Countess d'Aulnoy.
- Yellowley, Triptolemus. An enthusiast in agricultural improvements in Scott's *Pirate*. His sister Barbara was a good deal of a shrew and skinflint.
- Yellowplush, Mr. A fictitious London footman who figures as the author of certain memoirs and sketches by Thackeray, written as an illiterate footman might write.
- Ygg'drasil, Ig'drasil. The tree of the universe, a huge ash which holds an important place in Scandinavian mythology and cosmogony.
- Yniol (îni'ol). The father of Enid, in Tennyson's *Idylls of the King*.
- Yor'ick. Jester to the King of Denmark in Shakespeare's *Hamlet*. Sterne has introduced a personage of this name into his *Tristram Shandy*—simple, light-hearted, and humorous—intended as a portrait of himself.
- Ysolde. See ISOLDE.
- Yvetot (êv-tô). A small town of northern France, not far from Rouen, the site or territory of which formerly gave the title of king to its lord or possessor. An imaginary king of Yvetot has been celebrated in humorous verse by the French poet Béranger.
- Za'dig. The hero and title of a novel by Voltaire—a Babylonian tale showing that the ways of providence are inscrutable.
- Zanga. A revengeful Moor in Young's *Revenge*.
- Zano'ni. The hero and title of a novel by Bulwer Lytton, a man who can communicate with spirits, has the secret of prolonging life, of producing gold and gems, &c.
- Zapolya (za-pô'lyâ). The heroine and title of a dramatic piece by S. T. Coleridge.
- Zara. The heroine of Congreve's *Mourning Bride*.
- Zel'ica. The heroine in Moore's *Veiled Prophet*.
- Zenel'ophon. The 'beggar-maid', married by King Cophetua.
- Zephon. A cherub in Milton's *Paradise Lost*, sent with Ithuriel to seek for Satan in Eden.
- Zephyrus, Zephyr (zef'i-rus, zef'ir). In classical mythol. a personification of the west wind.
- Zerlina (zer-lê'na). A charming country girl in Mozart's opera *Don Giovanni*, whose head is for a time turned by the flatteries of the Don.
- Zeus (zûs). The Greek name of Jupiter.
- Zuleika (zu-lê'ka). An oriental female name said by the Mohammedans to have been that of Potiphar's wife. The heroine of Byron's *Bride of Abydos* is so named.

DESCRIPTION OF THE PLATES.

DECORATIONS OF HONOUR.

DECORATIONS of honour in the widest sense are, of course, almost infinite in number and variety, but those that we have to deal with here are only the most important, namely, such as are conferred by sovereigns and governments upon persons who have rendered important public services, or are for some reason deemed worthy of receiving special marks of distinction, in virtue of which they become members of special orders, as they are called. Many of the orders rank as *orders of knighthood*, and those members belonging to them who receive the full status of knights, if the orders are British, become entitled to the prefix "Sir" before their names. Other orders, however, have no such privilege connected with them, but all have some distinctive badge or personal decoration which the members are entitled to wear, and of which in general they may be justifiably proud. The badge in many cases takes the form of some sort of ornamental star, which is attached to the wearer's dress by a ribbon of special colour and pattern, and in some cases there may be a special collar belonging to the order, as well as various other insignia. In giving some particulars regarding the decorations of honour exhibited in the plate we shall begin with those that are British.

THE UNITED KINGDOM.

Order of the Garter.—The "most noble Order of the Garter", as it is termed, ranks at the head of all the orders of knighthood—not only British, but European. It was founded by Edward III., probably in 1344. Why the garter was selected as the emblem of the order has never been explained, though there is a well-known tradition, in which too much faith need not be placed, professing to throw some light on this point. The king seems to have instituted it in honour of his successful military operations against France, and hence the colour of its emblem, the garter, was blue, the French royal colour. The ribbon of the order is also blue. St. George was partly intended to be honoured by the institution of the order, and hence it is also known as the *Order of St. George*, while this saint figures prominently in its insignia. These are described and figured in the article GARTER in the Dictionary, but the appearance of the collar and badge will be much better appreciated from the coloured illustration in the plate. The garter itself is of dark blue velvet, edged with gold, and bears the motto *Honi soit qui mal y pense*, "Shamed be he who thinks evil of it". It is worn on the left leg, below the knee, but the queen wears it on the left arm, above the elbow. The collar consists of twenty-six garters encircling red roses, these being connected by as many golden knots. The order consists nominally of the sovereign and twenty-five other members, but there are also additional or supernumerary members. Besides the sovereign and princes of the blood, the rulers of the chief European countries are members of this order. The other members are all English, Scottish, or Irish peers. K. G. are the initials for Knight of the Garter.

Order of the Thistle.—This specially Scottish order is also called the *Order of St. Andrew*, the patron saint of Scotland, in whose honour it was instituted, and who naturally figures in the insignia. The collar and badge of the order are shown in the plate, while the insignia are also figured and described under the article THISTLE in the Dictionary. On the badge, as will be seen, is the figure of the saint bearing the cross of the well-known form associated with his name. The collar

consists of thistles and sprigs of rue enamelled in their proper colours. The ribbon of the order is green. The motto is *Nemo me impune lacessit*, "No one assails me with impunity". The special designation of "most ancient" belongs to this order. A fabulous origin, dating back to the time of King Achaius, has been sometimes claimed for it, and with more probability it has been said to have been instituted by James V. in 1540, but 1687 is the real date of its origin. The ordinary members of the order consists of sixteen Scottish noblemen. K. T. are the initials for Knight of the Thistle.

Order of the Bath.—The "most honourable Order of the Bath" dates from 1399, when King Henry IV. made forty-six esquires knights of the order. It afterwards fell into abeyance, but was renewed by George I. in 1725, and has several times since been enlarged and modified. Why the bath was selected as a designation of the order is not very clear, though bathing seems to have been one of the ceremonies associated with the conferring of Knighthood in ancient times. It now consists of three classes of members, those of each class being partly military (or naval), partly civil. The first class comprises Knights Grand Cross (G. C. B.), the second class Knights Commanders (K. C. B.), and the third class Companions of the Bath (C. B.). The members of the first two classes are of course entitled to the title "Sir", but those of the third class take no such designation. Officers of the military sections of the order must have attained a certain rank in the army or navy before they are admitted. The third class has by far the largest number of members, namely, 720 military, and 250 civil. The ribbon of the order is red; the motto is *Tria juncta in uno*, "Three joined in one", alluding to the three kingdoms, England, Scotland, and Ireland. The insignia differ somewhat according to the position of the possessor in the order, but the emblems properly belonging to it are the three imperial crowns and the rose, thistle, and shamrock. The plate shows the badge and collar belonging to a G. C. B. or K. C. B. of the order. The badge is an eight-pointed cross of gold and white enamel, with "a lion of England" (see description of plate of NATIONAL COATS OF ARMS) in each of the four angles; in the centre the rose, thistle, and shamrock, issuing from a sceptre between three imperial crowns; round this a red circle with the motto and a wreath of laurel issuing from a blue scroll bearing the words *Ich dien* ("I serve"—the motto of the Prince of Wales) in gold letters.

Order of St. Patrick.—The "most illustrious Order of St. Patrick" is, as its name implies, a specially Irish order. It was founded in 1783, and consists of twenty-one ordinary knights (Irish noblemen), besides the sovereign and royal princes. The collar is of gold, and consists of alternate harps, knots, and roses, there being a royal crown in place of one of the roses, to which is appended the badge by means of another harp. The badge is of gold, and oval in shape, round the outside being a ring of shamrocks, inside this a ring of blue enamel bearing the motto *Quis separabit?* (who shall separate?) and the date; while the centre is occupied by the red saltire or cross of St. Patrick, surmounted by a shamrock bearing gold crowns on its three leaves. The star of the order has eight silver rays, four of them larger than the others, the centre being similar to that of the badge inside the shamrocks, but circular in form. The ribbon of the order is sky-blue. K. P. are the initials for Knights of St. Patrick.

Order of St. Michael and St. George.—The "most distin-

guished order of St. Michael and St. George" was founded in 1818 by George IV. when regent, mainly for natives of the Ionian islands and of Malta; but after the Ionian islands ceased to be under British protection the order was extended and placed on a new basis, and it is now conferred on those who have held high and confidential offices within Her Majesty's colonial possessions, and in reward for services rendered to the crown in relation to the foreign affairs of the empire. The members are divided into Knights Grand Cross (G.C.M.G.), Knights Commanders (K.C.M.G.), and Companions (C.M.G.). Members of the first two classes are entitled to the prefix "Sir" to their names. The badge bears on one side (the obverse) the figure of St. Michael triumphing over Satan, on the other the figure of St. George and the dragon, with the motto *Auspiciis melioris evi*, "an auspice of a better time". The letters S.G. and S.M. form part of the collar—the initials of the two saints' names. Lions and white enamelled Maltese crosses also occur alternately. The ribbon of the order is blue, with a scarlet stripe.

Order of the Star of India.—The "most exalted Order of the Star of India" was founded in 1861 for the purpose of rewarding services rendered to the Indian Empire. It was subsequently enlarged, and consists of three classes: Knights Grand Commanders (G.C.S.I.), Knights Commanders (K.C.S.I.), and Companions (C.S.I.). The order ranks above that of St. Michael and St. George. "The badge consists of an oval cameo in onyx of the Sovereign, surmounted by a star of diamonds, and surrounded by the motto *Heaven's light our guide*. The gold collar consists of alternate red and white roses, the Indian lotus, and palm branches tied together in enamel. The star, five-pointed, is of diamonds, on a light-blue enamelled circle with the motto; rays of gold surround the whole. The ribbon is sky-blue, with a narrow stripe of white near the edge."

Order of the Crown of India.—The "imperial Order of the Crown of India" was instituted in 1878, and is conferred on ladies more or less associated with the Indian Empire, including Indian princesses and princesses belonging to the British royal family. The badge exhibits the monogram V.R.I. (*Victoria Regina Imperatrix*, "Victoria Queen and Empress") in diamonds, pearls, and turquoises, within an oval border of pearls, and surmounted by a crown. The ribbon is light-blue watered, edged with white.

Distinguished Service Order.—This order was instituted in 1886, and is conferred on military and naval officers for distinguished services performed in war and recognized in public despatches. The badge is a cross of gold and white enamel, bearing on one side within a laurel wreath of green enamel an imperial crown of gold on a red enamelled ground, and on the other side, similarly placed, the letters V.R.I. (see above). The badge is worn on the left breast, suspended by a red ribbon, edged with blue.

Order of Victoria and Albert.—This order was instituted in 1862, and, like that of the Crown of India, is conferred on ladies only, the recipients being divided into four classes. The badge is a cameo showing the heads of Queen Victoria and Prince Albert, surmounted by a crown. It is suspended by a ribbon of white moire.

Victoria Cross, or Order of Valour.—The decoration of the Victoria Cross was instituted in 1856, and is bestowed for "conspicuous bravery or devotion to the country in presence of the enemy". This is the sole condition on which it is bestowed, and in regard to the attainment of this highly-prized honour officers and men are on precisely the same footing. The cross is a Maltese cross of bronze, with the royal crest (a lion upon a royal crown) in the centre, and below this the words "For valour" on a scroll. It is worn on the left breast, being suspended by a red ribbon for the army, and a blue ribbon for the navy, with a bar or clasp attaching it to the ribbon. A person may have the cross awarded him oftener than once, in which case he receives an additional clasp. Every non-commissioned officer, warrant officer, petty officer, soldier, seaman, or marine obtaining the Victoria Cross receives a special pension of £10 a year, and an additional clasp carries with it an additional £5 a year.

Volunteer Officers' Decoration.—This was instituted in 1892, and is conferred on commissioned officers of twenty years' standing; but to make up the twenty years, half of any time during which the party may have served in the ranks is allowed to be added to his period of service as officer. The decoration consists of an oak wreath in silver, tied with gold, having in the centre the royal cipher (V.R.—*Victoria Regina*) and crown in gold. It is worn on the left breast, suspended from a green ribbon by a silver clasp ornamented with oak leaves. (This decoration is of course quite distinct from the volunteer long service medal intended for all volunteers who have completed twenty years' consecutive service.)

AUSTRIA.—The order here illustrated is that of *Francis Joseph*, founded by the Emperor Francis Joseph I. in 1849. The cross is of gold enamelled with red, and bears between the arms the Austrian double eagle in black enamel, with the initials F. J. in the centre.

BAVARIA.—The *Order of St. Hubert*, originally founded in 1444, was restored in 1708, and in 1800 was confirmed as the *Order of the House of Bavaria*. The motto of the order is *In trav vast, "firm in faith"*.

BELGIUM.—The *Order of Leopold*, founded by King Leopold I. in 1832, and consisting of five classes of members. The cross is of gold and white enamel, its arms being connected with a wreath of oak and laurel. The motto is *L'union fait la force, "Union produces strength"*.

DENMARK.—The *Order of the Elephant* dates from the fifteenth century, and the use of this somewhat peculiar emblem is explained by a legend of a Danish crusader who slew an elephant when fighting against the Saracens. The collar of the order is formed of elephants and towers (or castles) alternately.

FRANCE.—The only order now existing under the republican government of France is that of the *Legion of Honour*. It was founded by Napoleon I. in 1802, and consists of five classes, namely: chevaliers or ordinary members, officers, commanders, grand officers, and grand crosses. The Legion of Honour is both a civil and a military decoration, and the recipients are extremely numerous (over forty thousand), the members each receiving a yearly pension according to their rank in the body. The cross worn by the chevaliers is of silver and white enamel. The higher ranks have it of gold and white enamel. The female head in the centre is emblematic of the Republic.

GREECE.—The only Greek order is that shown on the plate—the *Order of the Redeemer*, founded by King Otto I. in 1833. There are five classes of members, the lowest being known as Knights of the Silver Cross, because in their case the cross is of silver, while those higher in the order have it of gold. The cross bears a Greek motto which means, "Thy right hand has been glorified in might".

HUNGARY.—The royal Hungarian *Order of St. Stephen* was founded by Maria Theresa in 1764, and consists of three classes. Its badge is an eight-pointed gold cross, enamelled with green, and surmounted by the gold crown of St. Stephen. In the centre of the cross on a red field is a patriarchal cross, and round this is the motto, *Publicum meritum premium*,—"A public reward for services". The ribbon is red in the middle and green on the edges.

ITALY.—The chief Italian order, the *Order of the Annunciation*, was founded by Amadeus VI. of Savoy in 1362. Its badge or chief decoration is a gold medallion, on which is a representation of the annunciation surrounded by love-knots, this being suspended from a collar of knots and roses.

ST. JOHN OF JERUSALEM.—The once famous and powerful *Order of the Knights of St. John of Jerusalem* or of *Malta* that formerly owned immense possessions throughout Christendom, has now dwindled away to a mere remnant. The Grand Master has had his quarters at Rome since 1834, and in England and some other countries besides Italy there

are a few representatives of the order. The cross of the order is of the well-known *Maltese* form, enamelled white and edged with gold, surmounted by a crown and trophy, and is suspended from a black ribbon round the neck.

NETHERLANDS.—The Netherlands *Order of King William* was instituted by William I. in 1815, and is bestowed as a reward for military services. The decoration consists of an eight-pointed gold white-enamelled cross, with a gold ball at each point, and between the arms, the Burgundian cross of laurel sprigs. Above it is a crown, by which it is attached to a ribbon of orange edged with blue. The arms of the cross bear the Dutch words, *Voor moed, beleid, trouw*—"For courage, zeal, fidelity". In the centre of the cross is what is intended to represent a steel for striking fire.

NORWAY.—The Norwegian *Order of St. Olaf* was founded by King Oscar I. in 1847, and is bestowed as a reward for services rendered to king or country, art or science, the members being divided into five classes. The cross is of gold and white enamel, eight-pointed, with a ball at each point, has a crowned Anglo-Saxon O (for Olaf) in the angles of the arms, and in the centre on a red ground, the lion of Norway surrounded by a blue ring. The ribbon is red with blue and white borders.

PONTIFICAL ORDERS.—The *Order of Christ* was founded as a Portuguese order in 1317, and when it was confirmed by Pope John XXII., in 1332, the Pontiff retained the right to nominate knights. The cross, as may be seen, is of a simple form, and is suspended from a red ribbon round the neck or attached to a button-hole. The decoration is bestowed for either civil or military services. The *Order of the Holy Sepulchre* was founded by Pope Alexander VI. (Borgia) in 1496, with the object of encouraging pilgrimages to the sacred spot. The cross is a so-called Jerusalem cross of gold and red enamel, surmounted by a gold crown, and having in the angles four similar crosses—the five together being said to symbolize the five wounds of Christ. The ribbon is black. The *Order of St. Gregory the Great* was founded by Pope Gregory XVI. in 1831, as a means of recognizing zeal in defence of the faith, but is now awarded for merit of any kind. The cross is in the same form as several others shown on the plate.

PRUSSIA.—The *Order of the Black Eagle*, the highest Prussian order, was founded by Frederick I. in 1701. It numbers thirty ordinary knights, and the bestowal of this order confers on the recipient hereditary nobility. The cross is of the Maltese form, made of gold and blue enamel, having black eagles between the arms, and in the centre in gold, the monogram F. R.—*Fredericus Rex*. The *Order of the Iron Cross* was founded by Frederick William III. in 1813, as a reward for distinguished services rendered in the war against the French. The decoration consists of a broad-armed iron cross mounted with silver, and having three oak leaves in the

centre. The crosses bestowed on account of the war of 1813-15 bear the initials F. W. with crown above, and the date 1813 below; those won in the Franco-German war of 1870-71 the initial W. and the date 1870. The decoration is not now confined to Prussians. There are three classes—grand crosses, and crosses of the first and second class.

RUSSIA.—The highest Russian order is that of *St. Andrew*, founded by Peter the Great in 1698, to reward distinction gained in the war against the Turks. The decoration consists of a double-headed eagle with outspread wings, black-enamelled gold, and overlying this a St. Andrew's cross of gold and blue enamel bearing a figure of the saint, and the letters S. A. P. R.—*Sanctus Andreas, patronus Rossie*, "Saint Andrew patron of Russia". The ribbon of the order is blue.

SPAIN.—The *Order of the Golden Fleece* is an Austrian as well as a Spanish order of knighthood. It was founded by Philip the Good, Duke of Burgundy, in 1429, in honour of the Redeemer, the Virgin Mary, and St. Andrew, and as a means of promoting religion and morality. Why the special designation was adopted for it is not very clear, but the characteristic emblem of the order is a sheep's skin suspended round the middle, and with the head and feet hanging down on either side. This is attached to what is described as a blue-enamelled flint-stone emitting flames, and fanciful decorations connect this with the red ribbon of the order.

SWEDEN.—The *Order of the Seraphim* is the highest and oldest of the Swedish orders. It is said to have been founded in 1260, and was renewed by Frederick I. in 1748. It is bestowed only on the highest dignitaries of Sweden, and on foreign princes and statesmen, and consists of only one class. The chief decoration is a cross of the eight-pointed or Maltese type with heads of cherubim between the arms, and in the centre, on a blue ground, three crowns and the letters I. H. S.—*Jesus hominum Salvator*,—"Jesus Saviour of men". This cross is suspended by a crown from the blue ribbon of the order.

TURKEY.—The *Medjidieh* or *Order of Medjid* was founded by the Sultan Abdul Medjid, in 1852. It is divided into five classes, the fifth and lowest of which numbers 6000 members. The decoration of the order represents a sun with seven groups of out-streaming rays, the groups being separated by small stars and crescents. In the centre is the cipher of the Sultan with the motto, in Turkish, around it,—“Zeal, honour, loyalty”. Several French and English officers received this decoration after the Crimean War, and it has been bestowed upon various foreigners since.

WURTEMBERG.—The *Order of the Crown of Wurtemberg* has as its badge an eight-pointed white-enamelled gold cross with lions in gold between the arms, and in the centre the initial F. (for Friedrich) surrounded by the motto,—*Furchtlos und treu*, "fearless and true", on a red circle.

ETHNOLOGY.

TYPICAL EXAMPLES OF THE PRINCIPAL RACES OF MANKIND.

ETHNOLOGY is a branch of the wider science of anthropology. It is sometimes used as synonymous with ethnography, but the latter, properly speaking, has a more limited scope, dealing mainly with the external features by which the various races of men are distinguished, while ethnology takes note both of the physical characteristics of the races of man, and also of their intellectual and moral peculiarities, their manners and customs, the peculiar features of their languages, their political or social organization, their origin, relationship and distribution, &c. In classifying the races of man the chief physical characters that have to be observed are the shape of the skull and form of the features, the proportions of the limbs, the colour of the skin, and the colour and nature of the

hair. As these characters exhibit various gradations, and may be more or less pronounced, it is not always easy to draw a strict limit between two races, and various classifications of mankind have been proposed. The classification here followed is that given by Oscar Peschel, the descriptions also being mainly taken from his work on the *Races of Man*. The most important types will be found illustrated in the accompanying plates.

I. THE AUSTRALIANS.

These comprise the inhabitants of the continent of Australia, of the islands on the coast, and of Tasmania—the latter now extinct. The skull of this race is of the dolichocephalic

type, the jaws being also prognathous or protruded. The nose is narrow at the root, widening greatly below. The mouth is wide and unshapely. The body is thickly covered with hair; the hair is black, elliptical in section, that on the head being frizzly, and standing out so as to form a shaggy crown. The colour of the skin is dark as a rule, sometimes black, though a light copper red also occurs. The Australians, on the whole, are in a very rude and degraded condition. Agriculture in any form is unknown among them; they have no permanent dwellings, but merely hastily constructed temporary shelters; their implements and weapons are few and inartistic, among the latter being the very remarkable boomerang; clothes they hardly wear, except a kind of cloak as a protection against bad weather; their food consists of roots, fruits, fish, and the produce of the chase, and they do not despise such eatables as caterpillars, lizards, ants, and worms. As a man must not marry a woman of the same tribe, the custom of wife-stealing is prevalent. Their language is much more complicated than that of many highly civilized races, being very rich in inflections.

II. THE PAPUANS.

This race, which is the one most closely allied to the Australians, occupies New Guinea, the Pelew Islands, New Caledonia, the Solomon Islands, New Hebrides, the Fiji Islands, &c., there being in some of those islands also an intermixture of Polynesians. The most distinctive mark of this race is their peculiarly flattened, abundant, and long hair, growing in tufts, and forming a prominent spreading crown round the head, sticking out as much as eight inches. The skin is always dark, being almost black in New Caledonia, brown or chocolate colour in New Guinea, blue-black in Fiji. The skull is high and narrow (dolichocephalic); the jaws prognathous; the lips fleshy and somewhat swollen; the nose hooked somewhat after the Jewish type. Both intellectually and morally the Papuans have attained a fair standard, and display considerable artistic and inventive power. Complete nudity is rare, both men and women having usually some sort of covering round the loins. They practise agriculture to some extent, having fenced fields and gardens. Among their religious ideas is included belief in a future state. The greatest blot on their character is the practise of cannibalism. As regards civilization the Fijians are the most advanced.

III. THE MONGOLOID NATIONS.

To this race belong the Polynesians and Asiatic Malays, the people of South-eastern and Eastern Asia, the Tibetese, some of the Himalayan tribes, all the Northern Asiatics, with their kinsmen in Northern Europe, and lastly the aboriginal population of America. The common characteristics of this widely spread race are: long straight hair, circular in section; almost complete absence of beard and body hair; skin dark-coloured, varying from leather-yellow to deep brown, sometimes inclining to red; prominent cheek-bones, and eyes in general set obliquely. The various members of the Mongoloid race may be classed under the following subdivisions.

1. The *Malay race*, comprising the Asiatic Malays and the Polynesian or Pacific Malays. The former include, besides the Malays of the peninsula of Malacca, of Sumatra, the Sunda Islands, Java, &c., also the Dyaks of Borneo, the Battas of Sumatra, the Tagals and Bisayas of the Philippines, the Macassars and Bugis of Celebes, and lastly the inhabitants of Madagascar. The Polynesians include the New Zealanders, the natives of the Sandwich Islands, and those of the Marquesas, the Samoan group, the Friendly Islands, &c. No race belonging to the Malay stock has a black skin; that of the Asiatic Malays is of a dirty yellow hue; among the latter obliquity of the eyes is common. The Asiatic Malays are said to be taciturn, cruel, and revengeful, but dignified and polished in manners. They have long since adopted Islamism. As regards natural abilities Wallace rates the Malays below the Papuans.

2. *Southern Asiatics with monosyllabic languages.*—This group comprises the Chinese, Indo-Chinese (Burmese, Siamese, Anamese, &c.), Tibetese, &c. They have all straight black hair, little beard or body hair, usually a yellow skin and oblique eyes. As is well known, a great portion of this family have attained a high degree of civilization, and are highly distinguished for inventiveness.

3. *Coreans and Japanese.*—These nations might be classed with the previous group, yet they display some well-marked peculiarities and their languages are considerably different in structure. The Japanese received their civilization from the Chinese, but have made many advances themselves; and, very different from the Chinese, they have shown themselves ready to adopt what is valuable in European civilization.

4. *Northern Mongoloids of the Old World.*—These comprise the Tungus, true Mongols, Turks, Finns, and Samoieds, all much resembling the Chinese and Indo-Chinese group in physical characters, but living generally by hunting, fishing, and cattle-breeding. To the Tungus belong the Manchooks, who conquered China and established a dynasty there. The Mongols (or Tartars) include the Kalmucks, Buriats, &c. Among the Turks are classed Ugurs, Usbecks, Osmanlis, Turcomans, Yakuts, Nogaians, Kirghiz, &c. The Osmanlis are the Turks of European Turkey. The Finns comprise, besides the true Finns and the Lapps of Northern Europe, the Magyars or Hungarians, and the Bulgarians. The Samoieds are nearly allied to the Finns.

5. *Northern Nations of doubtful position.*—The Yenisei Ostiaks, the Ainos of Yesso, the inhabitants of Saghalien, &c. The Yenisei Ostiaks form a small tribe on the Upper Yenisei, and are quite distinct from the Ostiaks on the Ob. The Ainos are the oldest inhabitants of the Japanese islands. They are remarkable for their general hairiness, especially in the midst of smooth-skinned races, though they do not exceed Europeans in this respect.

6. *The Behring's Nations.*—These are North Asiatic and American tribes, which for the most part inhabit the shores of Behring's Straits, or have migrated from that region. The Esquimaux, or Eskimo, are the most important. They have oblique eyes, and broad, flat faces, and are of rather a low stature; their intelligence is decidedly good.

7. *The American Aborigines.*—There can be little doubt that the original inhabitants of America crossed over from Asia, and the Mongol race is the only one with which they can be allied. Mongolian features are clearly marked among the natives of various parts of America, although generally the nose is more prominent and the face less flat. The colour varies, a reddish copper colour being very prevalent. The great bulk of the American aborigines may be classed as hunting tribes. In North America they are now sadly diminished in numbers; among them we may mention the Sioux (to which belong the Assineboins) and the Apaches. The Caribs live in Central America, and in the north of S. America. The Guarani (Gourani) are scattered over a great part of South America. At the time of the Spanish conquest American civilization had reached a high pitch in Mexico and Peru.

IV. THE DRAVIDIANS OR ABORIGINES OF INDIA.

These tribes have the skin generally very dark, frequently quite black; their hair is long and black, not straight but crimped or curly; the hair of beard and body grows profusely; the lips are thick and fleshy, somewhat like those of the negroes, but the jaws are never prominent. The Dravidians comprise the Tamils, Telugus, Gonds, Santals or Southals, &c.

V. THE HOTTENTOTS AND BUSHMEN.

These are tribes of little importance inhabiting South Africa. They have the hair tufted and matted, the beard scanty, the body almost hairless; the jaws are moderately prominent; the cheeks project laterally; the lips are full, but not so much so as with the negroes; the nasal bones project little at the root of the nose, which is of the snub shape; the

opening of the eyes is narrow but not oblique. They are slimly built, and the Bushmen in particular low in stature. Their colour is yellowish or yellowish brown. The language of the two peoples, different otherwise, is characterized by various peculiar clicking sounds, produced by applying the tongue to the teeth. They have always been engaged in cattle-breeding; were acquainted with the smelting of iron and working in metal before the advent of Europeans; wore sandals, leathern aprons, and cloaks; and for hunting carried bows with poisoned arrows. They are by no means devoid of intelligence, but their social development has been probably prevented by the dearth of water in South Africa.

VI. THE NEGROES.

The negroes inhabit Africa from the southern margin of the Sahara to the territory of the Hottentots and Bushmen, and from the Atlantic to the Indian Ocean. The negro races display great variety in external characteristics, and what is popularly considered the typical negro is rarely met with. The colour of the skin passes through every gradation, from ebony black to dark brown, copper red, olive, or yellow. In some tribes the nose is straight, in others hooked, though often broad and flat. The hair of the head is generally short, elliptic in section, and much crimped; that on the body is not plentiful; whiskers are comparatively rare. The negroes may be divided into the Bantu negroes and the Soudan negroes, these divisions being based on differences in language. Among the first, who occupy a great part of S. Africa, the best known are the Suaheli in the Zanzibar region, the Kafirs of the south-east, and the Bechuanas farther inland. The Kafirs are well known as a brave, warlike, and intelligent race; they practise cattle-breeding and cultivate the soil to a small extent. It is in the Soudan region that the most typical members of the negro race are found. The Mandingoes cultivate the soil and carry on an active commerce; they have public schools, and the majority of them can read. They are Mohammedans. The Bambarras are allied to the Mandingoes, but as yet have hardly emerged from barbarism. The Yollofs, tall and well-made, with regular features, are among the finest of the negro races. The Ashantees are intelligent, skilled in making cotton cloths, sword-blades, and other articles, cruel and blood-thirsty. These Soudan races are black, with crisp woolly hair.

VII. THE MEDITERRANEAN NATIONS.

These include all Europeans who are not Mongoloids, the North Africans, all Western Asiatics, and the Hindoos. Among them are the highest members of the human race. The northern nations have the skin quite fair; the southern have it darker; in North Africa and Eastern Asia it becomes yellow, red, or brown. The nose has always a high bridge; prognathism and prominence of the jaws and cheek-bones are rare; the lips are never intumescent, and in no other race are refined and noble features so frequent.

1. *The Hamites.*—This family occupies the whole of North Africa north of the Soudan and of East Africa to the equator. The Berbers are spread over a great part of this area, but in certain parts there has been a considerable intermixture of Arabs and other races. To this race belonged the ancient

Egyptians, the modern representatives of whom are the Copts of Egypt and the Nubians. The Gallas live in the Abyssinian region. Their hair is long and curly; their features regular and agreeable, often European in cast; their skin dark. They are a warlike, manly, and moral people. The Hamites were the first of the Mediterranean races to attain to a high state of civilization, their early history and achievements in this direction being made known to us from the ancient monuments of Egypt.

2. *The Semites.*—These comprise the Jews, Arabs, and Abyssinians, and the ancient Canaanites, Assyrians, Babylonians, and Phoenicians. They are more bearded than the Hamites, have high and generally aquiline noses, and well-marked eyebrows; skin varying from a rather dark shade to a deep brown. This race early attained a high pitch of civilization, and to them the nations of the West are deeply indebted.

3. *The Indo-European or Aryan family.*—This family is to us of paramount importance, as being that to which we ourselves belong. It has been divided from a remote period into two branches, a European and an Asiatic. The European comprises the Germanic or Teutonic nations (English, Germans, Dutch, Danes, Norwegians, Swedes, &c.), the Romance nations (French, Italians, Spaniards, Portuguese), the Slavonians (Russians, Bohemians, Servians, &c.), the Greeks, and lastly the Celts, now confined to Brittany, Wales, the Scotch Highlands, and Ireland. The Asiatic comprises the Hindoos, the Afghans, the Beloochs, the Persians, Armenians, and Kurds. The Indo-Europeans have the physical characteristics of the Mediterranean race in the fullest purity, while among the inhabitants of Europe the remarkable peculiarities of fair hair and blue eyes are frequent. The New World is now largely occupied by European Aryans, and probably the aboriginal races will in time entirely disappear. Among the Greeks, ancient and modern, the highest types of physical beauty are common. We meet with fair, ruddy and dark complexions, with golden, auburn, and dark hair, blue and dark eyes. The Spaniards, Italians, and natives of the south of Europe generally, have dark complexions, eyes, and hair, with frames less robust than the members of the Teutonic stock. The Germans were anciently described as tall, robust, with fair complexion, light or red hair, and blue eyes, and to some extent this description still holds good of the Germanic peoples. The physical characters of the Slavonians present little that is peculiar. The Russians, especially in the north, are fair, with light brown, flaxen, or red hair. The Persians, among Asiatic Aryans, are well known as a remarkably handsome people, with regular features, long oval faces, and large black eyes. The Mahrattas of Central India have proved themselves a warlike and vigorous race. Physically, they are said to be undersized, and not well formed.

4. *Europeans of doubtful position.*—These include the Basques of the north-east of Spain and south-west of France, and various tribes in the Caucasus. They are only set apart on account of their languages; in physical characters they undoubtedly belong to the Mediterranean race. The Basques are probably the oldest inhabitants of Europe. Among the races of the Caucasus may be mentioned the Georgians and Mingrelians.

DESCRIPTION OF THE PLATES.

ILLUMINATED WRITING.

ILLUMINATED writing is the name for writing in which ornamental letters in various colours are made use of, this writing being often embellished also with gold or silver, and small pictorial designs, arabesques, scroll-work, and the like. Writing of this kind has been known from a very early period, and in various countries. Colour was frequently used in ancient Egyptian writing, and the Romans seem also to have employed it to some extent. In the middle ages manuscripts were often ornamented in the most elaborate manner both in European and in Asiatic countries. After the invention and spread of printing the art of illumination was naturally practised to a very much smaller extent, but the use of colour for initials, &c., was adopted also in printed works, and is not even yet extinct, many books used in church service, for instance, having at least the *rubrics* (L. *ruber*, red) printed in red type. The earliest extant illuminated manuscripts produced in Europe belong to the fourth and fifth centuries after Christ, but works of this kind of such an early date are exceedingly rare. The oldest ornamented manuscripts in existence are a copy of *Dioscorides* at Vienna, and one of *Virgil* at the Vatican, both of the fourth century. The *Virgil* is written in capital letters, and is adorned with vignettes or miniatures. Another celebrated manuscript of early date, probably of the sixth century or earlier, is that known as the *Codex argenteus* (silver Codex), now in the university library of Upsala, containing Ulfilas's Gothic translation (or what remains of it) of the Scriptures, written in gold and silver letters on vellum stained of a purplish colour. In Ireland a special style of manuscript ornamentation early developed itself, among the chief features in which are the use of dots, generally in red, following the outline of the initials; the Z pattern; interlaced ribbons; fantastical animal forms curiously interlaced; delicate spiral lines; and tessellated patterns, or patterns made up of an infinity of little coloured squares. The most interesting specimens of this kind of work are the book of Kells at Dublin, and the Durham book in the British Museum, both containing the Latin version of the Gospels. The art flourished in Ireland from about the sixth century onward. From Ireland it was carried to Iona, and thence passed to the north of England. The Durham book was written at the priory of Lindisfarne, in the beginning of the eighth century, and the ornamentation is an admirable specimen of the illuminator's art. The book of Kells belongs to the ninth century, or, as others think, to the seventh. The Anglo-Celtic style of art had its influence on continental workmanship, as is seen in the illuminated manuscripts of the time of Charlemagne and Charles the Bald; while on the other hand continental models were imitated more or less in England, and the same manuscript may show both styles in combination. The work of the time of Charlemagne and Charles the Bald is more remarkable for splendour than originality, the ornamentation being exceedingly profuse, and gold being liberally employed. The initials often show patterns of classical origin mingled with intricate designs borrowed from the Irish school. The English illuminated manuscripts of the tenth and eleventh centuries, though owing much to foreign influence, are yet national in general character, and the initials and borders are especially remarkable for excellence in design, and for beauty and harmony in colouring. The next century shows greater strength

and originality. The twelfth century manuscripts are generally remarkable for the size and boldness of the writing, and the freedom and artistic character of the drawing. The initial letters are often on a gigantic scale, and display masses of conventional foliage, interspersed perhaps with animal figures, which appeared also in the initials of previous centuries. The English and French manuscripts of this period may be recognized by the delicate light blue and green colours employed in the initials. In the thirteenth century the Gothic character begins to take the place of the rounder letters of the preceding centuries. The initials, when they were not of the nature of miniature drawings, were "of various designs, highly painted in gold and colours, and generally having the interior spaces filled with interlaced and tortuous patterns, into which human figures and animals are introduced among conventional foliage. . . . Simpler letters are coloured in red and blue in patterns apparently taken from sections of architectural mouldings, the interior spaces being filled with delicate lace-work drawn with the pen in red, violet, or other ink. In the next two centuries initials became stereotyped in their design, and were generally subordinate to the borders and miniatures" (E. Maunde Thompson). The greater number of extant illuminated manuscripts belong to the period between the years 1200 and 1500. In the earlier times they were scarce and costly, but latterly they became much more common, and works belonging to almost all departments of literature were adorned by the illuminator's art, including romances, chronicles, histories, &c., besides bibles, psalters, missals, and prayer-books, or books of Hours (*Horæ*). Much valuable information is to be obtained from the pictorial illustrations adorning the pages of these works regarding the dress, furniture, utensils, arms, &c., of the period at which they were executed; since the illuminators had no hesitation in representing the personages of ancient history or legend in the garb and amid the surroundings of their own time.

The Latin alphabet was naturally that adopted by the nations of Western Europe, and the oldest manuscripts are written in capitals, two forms of which are recognized—the square and the rustic, the latter, as the name implies, being less carefully formed and somewhat rough in character, as suited to a more rapid style of writing. These were followed by what is known as the uncial style (see UNCIAL in Dict.), and that by the half- or semi-uncial, from which was developed the small or cursive hand. The continental modes of writing naturally passed over to England and Ireland. The earliest extant manuscripts written in Ireland are in half-uncials, similar to the characters met with in the manuscripts of Italy and France. The Book of Kells is written in this, and the Lindisfarne Gospels exhibit a smaller form of the same hand. This round hand was superseded in Ireland by a pointed hand which has survived in writing Irish up to the present time. In England the Roman uncials were imitated to some extent, but it was a modification of the Irish style that in Anglo-Saxon times became the national hand of England—first round, then pointed. This was superseded after the Conquest by the small or minuscule hand, which from the time of Charlemagne had become general in Western Europe, and from which the so-called black letter was developed, as used in the earliest printed books. Side by side with the book-hand there was

also a succession of cursive hands in use for charters and other documents deemed less important than books.

VIIITH. CENTURY.—The alphabets here shown are collected from various sources belonging to this century.

XTH. CENTURY.—The capital letter is from a Bible once belonging to Charles the Bald of France, now in the British Museum. The alphabet is from a manuscript in the Museum.

XIITH. CENTURY.—Both initial and alphabet from a manuscript of 1190, in the British Museum.

XIIITH. CENTURY.—Reduced from a large missal executed mainly in this century, but completed early in the next. The words *Beatus vir*, &c., are the beginning of the Latin version of the first Psalm.

XIVTH. CENTURY.—From various examples of the period in the draughtsman's own sketch-books, the majority of them being copied from works in the British Museum.

XVTH. CENTURY.—From reduced specimens from a fine MS. which belonged to the late Mr. Owen Jones, well-known as an authority on decorative art.

FISHES.

ILLUSTRATIONS OF TERMS USED IN ICHTHYOLOGY.

FISHES form the lowest of the five classes into which the great sub-kingdom VERTEBRATA is divided. They may be shortly described as vertebrate animals living in water and respiring the air therein contained by means of gills or branchiæ; having cold, red blood, and a heart consisting of one auricle and one ventricle; and having those organs which take the form of limbs in the higher vertebrata represented by fins. Their bodies are generally covered with scales overlapping each other like the slates on a roof, and their usual form (though with much diversity) is lengthened, compressed laterally, and tapering towards both extremities.

The scales of fishes assume various forms, which have been classed under the four types of *cycloid*, *ctenoid*, *ganoid*, and *placoid*. Cycloid scales are of a rounded form, and are those met with in the most familiar fishes. Ctenoid scales, like those of the perch, have spinous projections from their posterior margin. Ganoid scales are in the form of thick bony plates covered with a superficial layer of enamel. Placoid scales form detached masses of various forms often provided with spines. (See fig. 32.) In most fishes may be seen what is called the 'lateral line.' This consists of a row of scales extending along the side of the fish from head to tail, each pierced in the centre and communicating with a longitudinal canal. The purpose of this structure is not yet known for certain.

The skeleton varies greatly in character—from the lancelet that can hardly be said to possess a skeleton, to the well-developed osseous framework of the perch and many other fishes. Most fishes, however, can be classed as having either a cartilaginous or a bony skeleton. The vertebrae are amphicelous or biconcave, that is cup-shaped at either end; they vary in number from 17 to more than 200. (Figs. 28 and 29.)

The gills of fishes in their most common form consist of a great number of slender lamellæ, disposed like the teeth of a comb in parallel rows, and attached to bony arches on each side of the neck. They are richly supplied with blood-vessels, by means of which the blood that is driven to them by the heart, after circulating through the body, is purified through combination with the oxygen contained in the water, the water being constantly taken in at the mouth and made to pass over the gills. The blood after being aerated in the gills is driven again through the body without first returning to the heart.

The fins are called by different names according to their position. The pectoral fins, situated a little behind the head, correspond to the fore limbs of other vertebrata; the ventral fins, situated on the belly in front of the anal opening, correspond to the hind limbs; and there may be besides these, dorsal fins, attached to the back, and anal fins behind the anal opening. The pectoral and ventral fins when present are always each two in number; but both kinds may be absent. The tail or caudal fin is the chief organ of locomotion, and is

a broad vertical fin supported by the extremity of the vertebral column. In the most common form the tail is divided into two equal lobes, giving it a symmetrical appearance; this form is called *homocercal*. In many fishes, however, (as the sharks) the upper lobe of the tail is much larger than the lower, and the spinal column is prolonged into it. This form of tail is called *heterocercal*. (See fig. 31.)

The teeth of fishes are generally very numerous, and may be placed upon any part of the interior of the mouth, and even in the throat. (Fig. 30.) The stomach and intestines vary in form and dimensions. The stomach is usually large and well-defined. The intestine varies in length according to the food of the fish, being shortest in the carnivorous kinds. Its posterior extremity in many fishes has a peculiar spiral or screw-like structure. The liver is usually large, and the process of digestion is very rapid. The swimming bladder is a peculiar sac situated under the spine, filled with gas, and capable of being dilated or compressed, so as to enable the fish to rise or sink in the water. In some fishes it communicates by a duct with the oesophagus; in others there is no such communication; while in the flat-fishes, that live at the bottom of the sea, it is entirely wanting. Anatomically it is considered to represent a lung. (Fig. 27.)

Fishes propagate their species by eggs—though a few are ovoviviparous, *i.e.* retain the ova in their body till they are hatched. The ova are fertilized outside the body, and are usually in enormous numbers, as in the roe of the herring and cod. Among the elasmobranchs the number of ova is much smaller, and each ovum acquires before exclusion a horny sheath of various shape. The hatching process is generally left to take place without aid. A small number of fishes, however, construct nests.

The organs of smell consist of pits or sacs opening anteriorly, closed behind, with nervous filaments spread out on their walls. The sense of taste must be far from acute, and the same may be said of the sense of hearing. The apparatus of hearing has no external communication. The eye is generally of considerable size, and somewhat flattened externally. Special organs of touch are wanting in general, though some fishes, as the cod and mullet, have labial filaments or barbules to some extent serving this purpose. Among the most curious appliances with which fishes are provided are the electrical apparatus that appear in some species, as in the torpedo or electric ray and the electric eel, both of which possess batteries capable of giving a shock of considerable power.

Fishes may be divided into two sections—the *Chondropterygious* (from Gr. *chondros*, cartilage, and *pterygion*, a fin), or Cartilaginous fishes, having a cartilaginous or fibro-cartilaginous skeleton; and the *Ossaceous* or Bony fishes, having a bony skeleton. The following is the arrangement of fishes in orders, according to the system of Cuvier.

I. CARTILAGINOUS FISHES.

Order I.—CHONDROPTERYGII WITH FIXED BRANCHIÆ, *i.e.* with the outer as well as the inner edge of the gills attached, and opening outwardly by several apertures. This order comprises such fishes as the Lampreys, the Sharks and Rays.

Order II.—CHONDROPTERYGII WITH BRANCHIÆ FREE as in ordinary fishes, and like them with a single orifice furnished with an operculum or cover. To this order belong the Sturgeons and some other fishes.

II. OSSEOUS OR BONY FISHES.

The Osseous or Bony fishes, namely those having a firm and bony skeleton, and the gills free and protected by a bony gill-cover, are divided into six orders, as follows:

Order III.—PLECTOGNATHI, fishes that have the maxillary and pre-maxillary bones (which alone form the jaw) ankylosed or soldered together (whence the name from the Gr. *plektos*, interwoven, and *gnathos*, jaw); bodies covered with ganoid scales, plates, or spines. Examples are, the Globe-fish or Sea Hedgehog, the Sun-fish, and the Trigger-fish.

Order IV.—LOPHOBANCHII (Gr. *lophos*, a crest or plume). Fishes that have the gills in little round tufts disposed in pairs on the branchial arches: they are covered with ganoid scales. Example, the Sea-Horse or Hippocampus, and the Pipe-fish.

The rest of the bony fishes are divided into two great groups, the *Malacopterygii*, and the *Acanthopterygii*. The fishes of the first group, which is divided into three orders, have the rays supporting the fins soft or many-jointed (except sometimes the first ray of the dorsal or pectoral fins), and are generally covered with cycloid scales. The fishes of the second group, which forms a single order, have spiny rays in their fins.

Order V.—MALACOPTERYGII APODES. Fishes having a lengthened form; a skin soft and thick which scarcely suffers their scales to appear; no ventral fins (whence the name *apodes*, footless). Examples, the Common Eel, Electric Eel, Conger Eel, &c.

Order VI.—MALACOPTERYGII SUB-BRACHIATI—Fishes having the ventral fins placed under the pectorals, and immediately attached to the bones of the shoulder. Examples, the Cod, Ling, Haddock, &c., the Sole, Turbot, Flounder and other flat-fishes.

Order VII.—MALACOPTERYGII ABDOMINALES. Fishes having the ventral fins attached to the lower part of the abdomen and behind the pectorals. Examples, the greater number of our fresh-water fishes, besides many marine species; Salmon, Trout, Pike, Herring, Carp, &c.

Order VIII.—ACANTHOPTERYGII. Fishes that have the first portion of the dorsal fin, or the whole of the first dorsal when there are two—supported by spiny rays; sometimes instead of the first dorsal, they have nothing but a few spines; anal fin also with the first rays represented by spines, and generally one in each ventral fin: this order includes about three-fourths of all known fishes. Examples, the Perch, Wrasse, Mackerel, Mullet, Gurnard, &c.

Classifications differing in various respects from that of Cuvier are now commonly employed, though several of his divisions are still retained. The following orders (or sub-classes) are usually recognized.

Order I.—TELEOSTEI. Osseous or Bony Fishes, corresponding nearly to the Osseous fishes of Cuvier's classification.

Characters: Skeleton more or less thoroughly ossified; skull very complicated and composed of a number of distinct bones: two pairs of limbs usually present in the form of fins (the *Malacopterygii* having soft fin-rays, the *Acanthopterygii*, spinous rays); gills free, comb-like, or tufted; a bony gill-cover; usually cycloid or ctenoid scales.

Sub-order I.—*Malacopteri*. Fishes with a complete set of fins supported by rays, all of which are soft, with occasional and unimportant exceptions.

Fig. 1.—Common Salmon (*Salmo Salar*).

Fig. 2.—Flying-fish (*Exocoetus volitans*); Atlantic Ocean. Pectoral fins of enormous size, so as to support the fish in taking long leaps out of the water.
a Lateral line.

Fig. 3.—Garfish, Sea-pike or Mackerel-guide (*Belone vulgaris*); British seas.

Fig. 4.—Electric Eel (*Gymnotus electricus*); S. America; no ventral fins (apodous).

Sub-order II.—*Anacanthini*. Fishes with fins entirely supported by soft rays; ventral fins wanting, or if present placed under the throat beneath or in advance of the pectoral fins.

Fig. 5.—Cod (*Gadus morrhua*); ventral fins under pectorals; mouth with a barbule.

Fig. 6.—Turbot (*Rhombus maximus*); one of the flat-fishes; body bordered by long dorsal and anal fins; bones of head twisted so as to bring both eyes on one side of body.

Sub-order III.—*Acanthopteri*. Fishes having one or more of the first rays of the fins in the form of spines; scales usually ctenoid; ventral fins beneath or in front of the pectorals.

Fig. 7.—Perch (*Perca fluviatilis*); Britain.

Fig. 8.—Sapphirine gurnard (*Trigla hirundo*); British seas. One of the Sclerogenide or mailed-cheeks; head with plates and spines; pectoral fins large.

Fig. 9.—Angler or Fishing-frog (*Lophius piscatorius*); British coasts. Pectoral fins, fleshy and supported on framework of bones; head with filaments which the animal waves as it lies in the mud, to attract the fishes on which it feeds.

Fig. 10.—Remora (*Echeneis remora*); Mediterranean. Head with sucking disk by which the animal can attach itself to objects.

Fig. 11.—Sword-fish (*Xiphias gladius*); Mediterranean and Atlantic. Upper jaw prolonged, and forming a formidable weapon of attack.

Fig. 12.—Sea-bat (*Platax Gaimardi*); Eastern seas. One of the Squamipennes or scale-finned fishes.

Sub-order IV.—*Plectognathi*. Maxillary and premaxillary bones immovably connected; vertebral column often permanently cartilaginous; body covered with ganoid plates, scales or spines; ventral fins generally wanting.

Fig. 13.—File-fish or Trigger-fish (*Balistes conspicillum*); tropical seas.

Fig. 14.—Prickly Globe-fish or Sea-hedgehog (*Diodon pilosus*); tropical seas. Covered with spines, and body capable of being inflated like a ball.

Fig. 15.—Short Sun-fish (*Orthogoriscus mola*); found in most seas.

Sub-order V.—*Lophobranchii*. Gills in the form of little tufts upon the branchial arches; scales ganoid.

Fig. 16.—Hippocampus or Sea-horse (*Hippocampus gutturalis*); Atlantic. Tail prehensile.

Fig. 17.—Head and tail of Pipe-fish (*Syngnathus viridis*).

Order II.—ELASMOBRANCHII. Cartilaginous fishes, as the sharks and rays.

Characters: Skeleton cartilaginous; no bones in the head, the skull forming a cartilaginous box; gills forming a series of pouches; two pairs of fins supported by cartilaginous fin-rays; skin covered by placoid growths of various kinds, as tubercles, spines, &c.

Sub-order I.—*Holocephali*. Jaws bony and covered with broad plates representing the teeth; only one external gill-aperture, covered with a gill cover; a powerful defensive spine on the back. The Chimæra or King of the herrings is an example.

Sub-order II.—*Plagiostomi*. Mouth transverse (Gr. *plagios*, athwart) and on the under surface of the head; branchial sacs opening by several distinct apertures. Sharks, rays, skate.

Fig. 18.—White Shark (*Carcharias vulgaris*); the warmer seas.

Fig. 19.—Large spotted Dog-fish (*Scyllium catulus*); British coasts.

Fig. 19 *a*.—Sea-purse or Egg of Dog-fish, partially opened to show the young fish within.

Fig. 20.—Head of Hammer-fish or Hammer-headed Shark (*Zygena malleus*); tropical seas. The eyes are at the transverse extremities of the head.

Fig. 21.—Head of Saw-fish (*Pristis antiquorum*); in most of the warmer seas. Snout prolonged into a flattened blade with tooth-like projections on either side.

(See also fig. 29, which shows the skeleton of a ray.)

Order III.—GANOIDEI. Ganoid Fishes.

Characters: Body covered with ganoid plates, scales, or spines; skeleton partially ossified, the vertebral column being generally cartilaginous; skull with distinct cranial bones; usually two pairs of fins, the first rays of which are mostly in the form of spines; tail generally heterocercal.

There are few living ganoid fishes, the great majority of them being found fossil. The best known living examples are the sturgeons.

Order V.—PHARYNGOBRANCHII. The Lancelet, the only example.

Characters: No skull or distinct brain; no distinct heart; no vertebrae; no limbs; mouth a longitudinal fissure surrounded by filaments; walls of the pharynx perforated by ciliated slits which serve as branchiae.

Fig. 25.—Lancelet or Amphioxus (*Amphioxus lanceolatus*); British seas (natural size).

Order VI.—DIPNOI. Represented by only a few fishes, as the Mud-fishes.

Characters: Body somewhat eel-like in form and covered with scales, a median fin round the pointed posterior extremity; skull with distinct cranial bones; pectoral and ventral limbs both present and filiform or sometimes paddle-shaped; both gills and lungs present. These animals form a connecting link between the fishes and the amphibia.

GEOLOGY.

ILLUSTRATIONS AND EXPLANATIONS OF TERMS USED IN GEOLOGY.

STRATA left in their original position are usually *horizontal* (fig. 1, *a*). Where they have been subsequently disturbed so as to be tilted more or less out of that original position, they are said to be *inclined*; the angle of inclination is called the *dip*, and the rocks are said to *dip* in the direction of greatest slope or declivity. In fig. 3. the dip is shown by the faces of the rock represented as inclined towards the observer's left hand. Imaginary lines running at right angles to the line of dip are lines of *strike*, and are represented by the line where the surface of the water cuts the faces inclined towards the observer. The *strike* of a stratum is always constant for a given dip; but the *outcrop* or line where the rock appears at the surface, varies in form and direction with the variation in the form of the surface itself.

Strata bent upwards into an arch form what is called an *anticlinal* (fig. 1, *b*), and a bend in the opposite direction gives rise to a *synclinal* (fig. 1, *c*). Strata suddenly bent from a horizontal to a vertical position, and then back to a horizontal position again without rising to the same level as before, are called *uniclinal* (fig. 1, *d*). Sometimes the synclinals and

anticlinals have been squeezed together so as to double the rocks up quite on end; such strata are described as *vertical* (fig. 1, *e*). Where the folding has taken place in such a manner as to lay the folds more or less on their sides, the strata lying face downward are said to be *inverted* (fig. 1, *f*). *Contorted strata* are such as have been crumpled into an irregular series of folds, too complicated to be separately distinguished (fig. 1, *g*).

A *fault* is a plane of dislocation affecting rocks in such a way that a particular bed is broken off and slipped to a lower level on the one side of the plane than its counterpart on the other. (See fig. 2.) The side of the fault occupied by the lower of the two is called the *downthrow*, and the opposite side is sometimes spoken of as the *upthrow*. A fault is generally a narrow fissure extending downwards, either singly or in conjunction with other faults, to an indefinite depth from the surface; and extending in a horizontal direction to a distance dependent upon the amount of downthrow, and upon the nature of the dip affecting the rocks on either side of the fault. The *throw* of a fault is the amount of dislocation between the

termination of a bed on one side of the fault, and the corresponding point on the other. This may range from a dislocation scarcely perceptible to a throw of many thousands of feet.

Faults are usually inclined from the vertical more or less; the inclination is called the *hade* of the fault, which is said to *hade* in the direction of the slope. In an ordinary fault this hade, or inclination from the perpendicular, is forward at the foot in the direction of the downthrow, and no part of a faulted stratum is brought vertically beneath its counterpart on the other side of the fault. Where the fault *hades* in the opposite direction it is called a *reversed fault* (fig. 2, a).

Two or more faults frequently throw down towards each other, and their respective *hades* are such as to cause the faults to meet below the surface. Such faults are termed *trough faults* (fig. 2, b). Where the depression of the strata represents the aggregate effect of a series of minor faults, each in succession letting the rock down in the same direction to lower levels, the term *step fault* is found convenient (fig. 2, c).

The faces of the rock contiguous to a fault are frequently scored and fluted, and they exhibit other signs of grinding against each other under pressure. To these markings the term *slickensides* is applied.

The matter detached by friction and caught in the inter-spaces between the faces of the rock in a fault is usually cemented by infiltrated mineral matter, and then constitutes a *fault-breccia* or *ridger*.

Where faults, seen in plan, are shifted out of their course along the line of a fault transverse to them in direction, this last is called a *cross vein* or *caunter*, and the faults deranged are said to be *trailed*.

The same kind of dislocation seen in vertical section is distinguished as a *heave*. In this last case the dislocated fault is undoubtedly older than the fault that heaves it. In the former case it is the reverse.

The contact disturbance attending a fault gives rise to bending of the strata next the fault. This bending is often spoken of as the *butt*.

The name of *joints* (fig. 3) is applied to the divisional planes that cut in two or more directions across the bedding planes of hard rocks, and divide what would otherwise have been continuous sheets of stone into separate blocks. *Jointing* differs from *cleavage* in affecting the rock only along certain lines, instead of developing a general tendency to split into an indefinite number of sheets as cleavage does. Joints are developed in greatest prominence in thickly-bedded stratified rocks, especially in such as are of a compact nature. In such cases they may be observed to cut down through the rock in two or more directions approximately perpendicular to the planes of bedding. The horizontal extension of joints may range to every point of the compass, but there is a marked tendency, where more than two sets occur, for one of the more prominent sets (or *master joints*) to be intersected by another prominent set at such angles as to enclose blocks whose outlines vary from rhombic to rectangular. (See also fig. 9.)

The bearing, or orientation, of joints varies considerably in different places, and does not appear to be persistent for any great distance in any given district; but it is not uncommon to find one set ranging in a general way in the same direction as the dip, and another set bearing at right angles to these and therefore parallel with the strike. The first are called *dip joints*, and the other *strike joints*. In the diagram (fig. 3,) the *dip joints* are shown cutting down vertically through the rock in a direction away from the observer; while the *strike joints* intersect the *dip joints* at right angles, and thus unite with the bedding planes to divide the rock up into rectangular blocks.

Strata are called *conformable* (fig. 4,) when they lie with an even junction on the original upper surface of one and the same bed of the rocks next below them, and are therefore affected to an equal extent by the same dips. In normal *conformability* the upper strata form part of one series with the beds immediately below them. In some other cases, while

the physical relation of the higher strata to the lower are of this nature in one locality, in another the lowest bed of the higher service may extend across, or *overstep*, several members of the series next below. In such a case the rocks are said to be *locally* or *accidentally conformable*.

Where a stratum has been deposited in unequal thickness in an area under notice, so that at one part it is found to thin away to nothing, the upper stratum extending beyond it is said to *overlap* the one that thins out, and the case is described as one of *overlap*. (See fig. 5.) Thus in the diagram *b* thins away in one direction so that *a* comes into direct contact with *c* below, and is said to overlap *b*. Tracing the physical relations of these in an opposite direction, or from *d* in the direction of *a* in the figure *b*, is said to *underlap* *a*. In *overlap* the absence of the bed that is overlapped arises from the fact that the stratum locally absent has never been deposited at that point at all; while in *overstep*, which is often confounded with *overlap*, and denotes the relation of a higher set of strata to a lower in the case of *unconformity* (fig. 6), the strata locally absent have been disturbed and afterwards removed by *denudation*.

Where a particular stratum known to form a bed of importance in one direction gradually dies away in another, as a result of unequal deposition, the stratum is said to *thin out* at the point where it comes to nothing (fig. 5). Another term of the same kind, which is often restricted to the attenuation of a bed of minor importance, is *wedge-bedding*.

Where the basement beds of one group of strata have been deposited over the edges of more than one member of the series below, as a consequence of the lower group having been consolidated, disturbed by upheaval, and partly denuded, before the deposition of the strata that now overlie them, the two sets are said to be *unconformable* to each other (fig. 6), and their physical relations to each other are denoted by the term *unconformability* or *unconformity*. Unconformity may range in extent from such cases as that of the Lower Eocene strata on the Chalk in the South of England, where the discordancy can be perceived only by an instructed eye, to such unconformities as that at the base of the Carboniferous rocks in the northern parts of the kingdom, where the gently-inclined basement beds of the higher series are supported upon the upturned edges of the rocks below, so that the Carboniferous rocks *overstep* a thickness of over five miles of the pre-carboniferous rocks beneath (fig. 6).

Interbedded eruptive rocks (fig. 7) are accumulations of rock matter that have been primarily derived from deep-seated sources, and that have been distributed over the surface in the neighbourhood of a volcano. The matter cast out from a volcano may consist of *lavas* (fig. 7, a) or the liquefied rock that has flowed from the crater over the surface adjoining; or of the same materials as compose the lavas hurled forth in the form of various-sized fragments, and subsequently rained through the air and distributed over the surface. Mud poured out from volcanic vents also forms part of the matter ejected. The coarser volcanic materials of a fragmental nature form *volcanic breccias* or *agglomerates* when compacted into stone (fig. 7, b); while the like accumulations of finer materials are usually distinguished as *tuffs*. In maritime districts any or all of these forms of eruptive matter may be deposited alternately with beds of the ordinary sedimentary type, and the tuffs may graduate insensibly into other deposits in directions away from the vents. Interbedded eruptive rocks are known to occur of all ages, from the oldest Cambrian rocks of St. David's to the strata forming at the present day.

Intrusive eruptive rocks (fig. 8) differ from *interbedded* or *contemporaneous eruptive rocks* in their mode of occurrence in relation to the strata surrounding them; as they commonly cut across the bedding of the stratified rocks, and are therefore of later date than the rocks they traverse. Intrusive eruptive rocks may occur in the form of great masses that from an unknown depth below the surface have, as molten matter, eaten their way upwards through the overlying rocks and have solidified in the form of a great mass (fig. 8, a). Or

the causes that gave rise to the formation of a mass in one case, may in another have impelled the molten matter in such a direction that it has eaten its way into the rocks along a direction frequently approaching that of the bedding, and thus have given rise to *intrusive sheets* (fig. 8, b). In other cases the same matter has been forced upwards along vertical fissures, and has been left in the form of wall-like masses of rock or *dikes* (fig. 8, c).

Cleavage (fig. 9) is the tendency to split into an indefinite number of thin layers in one direction, which direction is not necessarily connected with any original structural differences of the rock.

There are two recognized forms of cleavage; the one representing the tendency inherent in certain definite chemical compounds to fracture more readily in particular directions than in others, which directions always bear some definite geometrical relation to the particular crystalline structure of the mineral; while the other is developed only as the result of certain imperfectly understood special conditions, which have affected particular portions of large mineral aggregates more or less according to their texture rather than to their chemical composition. It is now customary to restrict the term *slate* to rocks of this description. The rocks most commonly affected by *slaty cleavage* are such as originally consisted of clayey or argillaceous materials of sedimentary origin; but the same structure is not uncommonly met with in the finer portions of the older volcanic tuffs. A good example of this last is afforded by the cleaved volcanic tuffs or "green slates" of the English Lake District. The discrimination between planes of cleavage and the original bedding planes of the cleaved rock is often attended with great difficulty in the field, and can generally be satisfactorily determined only by the discovery of the *strike*, or alternations of texture, resulting from original differences in the character of the various layers of material composing the rock. In the figure the *strike* or original bedding is shown by the undulating bands parallel to the upper and the under surfaces, the triangular face cutting obliquely downwards across the front right-hand corner of the specimen represents a plane resulting from the cleavage. The edges of other cleavage planes are shown cutting across the *strike* or bedding in directions parallel to the edges of the triangular face. The remaining bounding surfaces at the front, sides, and back are *joints*.

Conglomerate (fig. 10, A) is the name given to rock consisting of consolidated shingle. It is formed of an accumulation of rock-fragments of sedimentary origin, many of them of large size, and most of them well-rounded in form, bound together into a mass of a more or less stony nature by some cementing material instead of remaining in its original condition of a bed of loose stones or shingle. Where the conglomerate consists of water-worn materials of volcanic origin it is distinguished as a *volcanic conglomerate*, or *agglomerate*.

If the proportion of materials of a rounded form is less than that of such as are angular the rock then becomes a *breccia* (fig. 10, B). *Breccia* thus resembles a conglomerate in consisting of a noticeable proportion of large stones compacted into a mass, but is characterized by containing more angular constituents than rounded. Where the materials consist of angular fragments of rocks derived directly from a volcanic source the resulting rock is a *volcanic breccia*; finer materials of the same nature constitute a *tuff*. Both volcanic breccias and tuffs are often termed *volcanic ashes*. (See also fig. 7.) Where the rounded fragments outnumber the angular these rocks graduate into their respective conglomerates.

Oblique lamination (fig. 11) is a term usually applied to the deposition of the several layers composing a bed of rock at an angle different from the general lie of the rock as a whole. Where the inclined layers are of considerable thickness the rock is said to exhibit *false-bedding*, or *current-bedding*, the last-mentioned term denoting the cause. Oblique lamination and false-bedding generally result from irregular deposition of materials drifted along the bottom by variable currents of water; but a similar structure is often developed in great perfection where sand, or other materials of that

general nature, is drifted into beds by the action of the wind.

The name of *intier* (fig. 12, A, and I in fig. 13) is given to an exposure of an older stratum at the surface in such a manner that it is completely surrounded by other strata of later date, which formerly extended across it, but have since been removed by irregular denudation. Occasionally the exposure of the older stratum is due to the combined effects of faults and denudation; in that case the older stratum exposed is termed a *faulted intier*.

An *outlier* again (fig. 12, B, and also O in fig. 13) is an outstanding relic of a stratum, formerly more extensive, which has been isolated by the removal of the strata that once connected it with the principal mass, so that it now occurs as a detached remnant surrounded by rocks of older date.

Escarpment (fig. 13, E) is a term correctly restricted to the steep outer edge presented by such strata of a series as have better withstood the action of the destroying influences that have been brought to bear against them than the strata immediately above and below. An escarpment differs from a *cliff* in coinciding with the outcrop of a particular bed of rock, whether this is inclined or not, whereas a *cliff* is formed without regard to either the nature or the lie of the rock, and its base always approximates more or less closely to horizontality. Escarpments may be regarded as ranging on the whole parallel with the *strike*, and their steep side as facing in the opposite direction to the *dip* or direction of greatest inclination of the rock. The slope formed by the exposed upper portion of an inclined stratum, extending from the escarpment in the direction of the line where the next higher stratum comes on, is called the *dip slope* (fig. 13, D). (See also fig. 3.)

The names *boulders* and *boulder clay* (figs. 14, 15, 16) pertain to a promiscuous assemblage of stones of all sorts and sizes jumbled together without regard to either their size or their form in a matrix of clay which usually exhibits no very obvious signs of stratification. The stones include a variable percentage that are smoothed and are characterized by the occurrence of grooves and scratches, mostly running in the direction of the length of the stone, but sometimes crossing that line at various angles. The stones vary in size, from mere grains up to blocks many feet in diameter, and they may include representatives of rocks whose birthplace is known to lie at distances ranging from a few hundred yards to as many miles from their present resting-place. The larger stones that are smoothed and furrowed in this way are called *glaciated boulders* (fig. 14). Such boulders are usually found to have travelled outwards in a direction away from the centres of mountain groups; but more of them have travelled in directions from the Pole towards the equator than in other directions. It is not uncommon to find instances of boulders occurring at points considerably higher than any part of the parent rock.

The rock surface underlying boulder clay is frequently characterized by similar appearances to those presented by the boulders; that is to say, it is smoothed and more or less distinctly furrowed in one or more directions. Where this surface has a convex, knoll-shaped form, it is called a *roche moutonnée* (fig. 15, A). Boulders carried by ice and left stranded in conspicuous positions are often spoken of as *perched blocks* (fig. 15, B).

The phenomena under notice are now generally admitted to be due to glacial action of some one or other kind; but the particular mode of operation resulting in any given effect has not yet been generally agreed upon.

The *columnar structure* of rock is exhibited in fig. 17. This is a form of jointing affecting certain rocks that have originated in a molten condition. The rock is intersected at right angles to the surfaces of cooling by three or more sets of divisional planes, which occur at approximately equal distances apart, and cross each other at such angles as to divide the rock into a series of prisms more or less regularly hexagonal in section. Columnar structure is developed in greatest perfection in basaltic lavas; but it often occurs,

though usually in a less perfect form, in eruptive rocks of other kinds.

Rocks often present a *vesicular structure* (fig. 18) where lava flowing out from volcanic vents contains much entangled gas or vapour, and the molten rock is blown out at numerous points, so that cavities, cells, or *vesicles* are formed. These occur in greatest number where the pressure is at the least, which is usually near the upper surface of each flow. Vesicular structure may range in extent from a few cells occurring at remote intervals throughout rock otherwise compact in texture, to rock like pumice, which consists of a light spongy mass of cell walls, like a mass of froth changed to stone.

The vesicles in a lava are usually drawn out into almond-shaped cavities by the flow of the rock prior to complete solidification. Where these almond-shaped cavities become filled with other mineral matter the separate kernels are called *amygdules*, and the rock itself an *amygdaloid*. Vesicular structure is sometimes found in intrusive rocks; and is occasionally developed also in rocks of purely sedimentary origin.

Cellular structure resembles vesicular structure in some respects, but is often due to the shrivelling up of the rock caused by a change of its dimensions in passing from one chemical state to another, as where ordinary limestone is altered into *magnesian limestone* or *dolomite*, and cells or *geodes* result from the general contraction of the rock. Another kind of cellular structure is due to the removal, by solution or otherwise, of part of the materials composing a fragmentary rock, such as a breccia, or a conglomerate, the spaces they occupied being left vacant.

Foliation (fig. 19) is the re-arrangement of the constituents of a rock by metamorphic action in such a manner that they form parallel layers of definite mineral constitution. These layers are not necessarily connected with the original stratification of the rock, though their coincidence is common. As a rule foliation represents one of the stages of metamorphism whose extreme is occupied by granite. Amongst the rocks exhibiting foliation are *mica schist* and *gneiss*. In fig. 19, which represents a piece of gneiss, the lighter bands denote quartz and felspar, and the darker bands layers of mica.

Granite (fig. 20) is essentially a granular-crystalline eruptive rock formed and consolidated beneath the surface under conditions of great pressure. The minerals composing it consist of more or less well-defined crystals of orthoclase or potash felspar, with interspersed granules of quartz, and, in normal granites, with one or more species of mica; other species of felspar are also usually present as well. The separate constituents of granite may range from proportions only just discernable by the unaided eye, to crystals two inches or more in length. Where large crystals form a conspicuous feature in the rock it is termed a *porphyritic granite*. Granites occur of all ages, from the date of the oldest known rocks down to the Tertiary Period. Granites appear to represent the innermost parts of masses that were connected on the one hand with truly intrusive and volcanic rocks, and on the other with metamorphic rocks of sedimentary origin.

The *spherulitic structure* (fig. 21) is one of the principal types of minute structure rendered evident by a microscopic examination of thin slices of certain vitreous *acid rocks* (eruptive rocks containing more than 60 per cent of silica), notably in the glassy or vitreous lavas known as *obsidian*. It is occasionally developed in similarly constituted rocks of intrusive origin, or even in rocks whose present peculiarities of structure are largely due to the action of *metamorphism*. Under the microscope spherulitic rocks exhibit, in a base of variable mineral constitution, minute scattered granules of a more decidedly vitreous nature, which show an approximately circular outline more or less definite in proportion to the abruptness or otherwise of the transition from the *spherulite* into the matrix. The inner part of each spherulite usually presents a radiate structure, due to the incipient development of groups of minute crystals.

The *perlitic structure* (fig. 22) is due to a tendency developed in certain vitreous acidic rocks to fracture into minute concentric layers of a spheroidal form, in the interspaces between the minor shrinkage-fissures traversing the rock. On a large scale the same structure finds a parallel in the spheroidal structure developed in some basalts. Both structures are now generally regarded as being developed by the contraction of the rock consequent upon its solidification. (Rutley, *Study of Rocks*, p. 182.)
